An Automated Procedure for Computing the Three-dimensional Transonic Flow Over Wing-body Combinations, Including Viscous Effects William Henry Mason, Donald Mackenzie, Mark Stern, William F. Ballhaus (Jr.), Juanita Frick, 1977 This appendix volume contains the program listing and flowchart for the program described in Volume I and Volume II The program is a numerical method that predicts the detailed pressure distribution on wing body combinations at transonic Mach numbers less than one and integrates the pressures to obtain aircraft force and moment data The code has been developed with the intent of providing the user with an easy to use and reliable tool The basic inviscid prediction method is the modified transonic small disturbance theory program In order to provide accurate surface pressure predictions on the wing several additional features of the typical transonic flowfield have been incorporated These consist of the viscous displacement effect
