Novel approaches to environmentally friendly sustainable production and integrated management have stimulated new research directions and innovative biochemical and molecular methods have opened new avenues in taxonomy and breeding. In addition to the issues historically associated with traditionally growing countries the book reviews the development of new production centers in Africa Asia and South America. In 20 chapters this book reflects three main trends in plant science and horticulture: A demand for sustainable and environmentally friendly production; Widespread employment of new molecular technologies; The globalization of the production and marketing chains. Thoroughly modern and in tune with the needs and methods of the geophytes industry *Ornamental Geophytes From Basic Science to Sustainable Production* will benefit not only researchers who have been engaged for years but also new researchers and students who must meet and challenge the existing dogmas. In addition the information contained in this book is vital to bringing the value of flower bulbs to the worldwide consumers who are the most important and last links in the chain of utilization and profitability of all ornamental products.
