

LAW OF GRAVITY

Law of Gravity, formulated by Sir Isaac Newton, describes the mutual attraction between two objects due to their mass. It states that the gravitational attraction force is directly proportional to the product of their masses and inversely proportional to the square of the distance between their centers.

The mathematical equation is:

$$F = G \cdot \frac{m_1 \cdot m_2}{r^2}$$

where F is the force, G is the gravitational constant, m_1 and m_2 are the masses, and r is the distance.

The Laws of Gravitation Isaac Newton,1900 **Derivation of Newton's Law of Gravity** Balungi Francis,2020-04-10 In
Newton's view all objects exert a force that attracts other objects That universal law of gravitation worked pretty well for

predicting the motion of planets as well as objects on Earth and it is still used for example when making the calculations for a rocket launch. But unfortunately it cannot be derived from first principles. While Newton was able to formulate his law of gravity in his monumental work, he was deeply uncomfortable with the notion of action at a distance that his equations implied. In 1692 in his third letter to Bentley he wrote: "That one body may act upon another at a distance through a vacuum without the mediation of anything else by and through which their action and force may be conveyed from one another is to me so great an absurdity that I believe no man who has in philosophic matters a competent faculty of thinking could ever fall into it." He never in his words assigned the cause of this power. In all other cases he used the phenomenon of motion to explain the origin of various forces acting on bodies but in the case of gravity he was unable to experimentally identify the motion that produces the force of gravity. Moreover he refused to even offer a hypothesis as to the cause of this force on grounds that to do so was contrary to sound science. He lamented that philosophers have hitherto attempted the search of nature in vain for the source of the gravitational force as he was convinced by many reasons that there were causes hitherto unknown that were fundamental to all the phenomena of nature. These fundamental phenomena are still under investigation and though hypotheses abound the definitive answer has yet to be found. I have not yet been able to discover the cause of these properties of gravity from phenomena and I feign no hypotheses. It is enough that gravity does really exist and acts according to the laws I have explained and that it abundantly serves to account for all the motions of celestial bodies. Newton. In this book gravity has been derived from first principles without any assumptions. What has been believed to be a fundamental force for years can actually be derived from first principles, has this book explains. The derivation is simple and straightforward. The experiment to the derivation has also been proposed. This book will help us rethink Physics. In this book gravity has been derived from first principles without any assumptions. Herbert Spencer, 1873 If I was you, I wouldn't be startin' from here Michael Hill, 2013 If I Was You I Wouldn't Be Startin From Here. This is the story of a working class boy born before the last war and tells the story of his life. His early life living in Ireland and the tumultuous times in Ireland before and after the war. The astonishing events of his Mother's death and the turmoil that ensued. The quaint and different attitude of the culture of youth at that time. His struggle to understand himself and the world. He tells of his experience in the RAF and his emergence into the Trade Union movement after University and he tries to show that in some way he had enjoyed an immensity of good luck which as his story unfolds has a certain rhythm which he is sure has order and cohesion. He demonstrates this with humour and irony. This is his story. **Fragile Smile**

The Origin of Gravity and the Laws of Physics Balungi Francis, 2020-05 Since it was developed Newton's law of

gravitation and many other laws of physics cannot be derived from one grand underlying principle Deriving Newton's law of gravitation or Einstein general relativity theory would mean that gravity emerges from something else and that would mean that the only known Newton's law of universal gravity is no longer a fundamental law of physics Although this might be true I believe that everything must have an origin I believe that there is a fundamental universal physical law from which all other known physical laws can be deduced I also believe that the laws of physics are not picked at random but there exists an underlying principle from which they can be derived with ease Failure for some minds to grasp this principle doesn't mean that it doesn't exist Because I was used to deriving and proving formulae in pure math I didn't like the way the laws of physics were presented to me without proof A physics tutor would just write down a set of physical laws without proof There are so many physics books which still do the same thing Being curious and passionate to finding out how I could derive all the laws of physics from one single equation is proof that this book would have never existed in the first place if had not discovered the hidden principle that underlies all physics
