

Protostar looks like a star, but its core is not yet hot enough for nuclear fusion.

Main sequence stars fuse hydrogen atoms to helium atoms in their cores.

As the Large Red Giant condenses, it heats up even further, burning the last of its hydrogen and causing the star's outer layers to expand further.

A Supernova can be triggered

1. by the sudden re-ignition of nuclear fusion in a degenerate star.
2. by the gravitational collapse of the core of a massive star.

Protons and electrons left after a supernova are forced to combine, to produce a very dense neutron star.

If the mass is significantly greater, the gravity will be so strong that the neutron star will shrink further to become a black hole.

*White Dwarf*

A white Dwarf becomes a black dwarf when it stops emitting light.

A Red Giant is formed when a star runs out of hydrogen at its core and starts fusing hydrogen into helium outside the core, releasing energy and expanding the star.

Large Red Giants are hot enough to turn the helium at their core into heavy elements like carbon.

Once the star runs out of fuel, it collapses under gravity, and the outer layers are ejected into the vastness of space.

The remains of the star are devoid of fuel. They consist of degenerate matter with a very high density.

*Galactic and Extragalactic Star Formation* Ralph E. Pudritz, Michel Fich, 2012-12-06 Recent advances in the instrumentation used to observe star forming regions in both our own Milky Way and in external galaxies have transformed the subject from a phenomenological pursuit into an increasingly unified physical science High resolution centimetre millimetre infrared and optical studies of local star forming clouds have allowed us to probe the physics of star formation down to spatial scales approaching those of the solar system These developments make it possible to better constrain the basic physical processes underlying star formation itself At the same time these new instruments have placed extragalactic studies on a footing detailed enough to allow comparison with star forming regions within our own galaxy This revolution means that we will soon be able to link the physics of local star forming regions to the global star forming properties of galaxies The entire structure of this NATO Advanced Study Institute was designed to explore this new view of the subject This Institute on Galactic and Extragalactic Star Formation was held from June 21 July 4 1987 at the Conference Centre in the village of Whistler British Columbia Canada The informal atmosphere of this lovely mountain resort stimulated many valuable scientific exchanges The Institute was funded by a major grant from NATO Scientific Affairs Additional financial and logistical assistance was provided by the Canadian Institute for Theoretical Astrophysics CITA and McMaster University

**The Physics of Star Formation and Early Stellar Evolution** Charles J. Lada, N.D. Kylafis, 2012-12-06 The origin of stars is one of the principle mysteries of nature During the last two decades advances in technology have enabled more progress to be made in the quest to understand stellar origins than at any other time in history The study of star formation has developed into one of the most important branches of modern astrophysical research A large body of observational data and a considerable literature now exist concerning this topic and a large community of international astronomers and physicists devote their efforts attempting to decipher the secrets of stellar birth Yet the young astronomer/physicist or more advanced researcher desiring to obtain a basic background in this area of research must sift through a very diverse and sometimes bewildering literature A literature which includes research in many disciplines and sub disciplines of classical astrophysics from stellar structure to the interstellar medium and encompasses the entire range of the electromagnetic spectrum from radio to gamma rays Often the reward of a successful foray through the current literature is the realization that the results can be obsolete and outdated as soon as the ink is dry in the journal or the conference proceeding in which they are published

**An Introduction to Star Formation** Derek Ward-Thompson, Anthony P. Whitworth, 2011-02-10 Guiding the reader through all the stages that lead to the formation of a star such as our Sun this advanced textbook provides students with a complete overview of star formation It examines the underlying physical processes that govern the evolution from a molecular cloud core to a main sequence star and focuses on the formation of solar mass stars Each chapter combines theory and observation helping readers to connect with and understand the theory behind star formation Beginning with an explanation of the interstellar medium and molecular clouds as sites of star formation subsequent chapters address the building of typical stars and the formation of high mass stars concluding with a discussion of the by products and consequences of star formation This is a unique self contained text with sufficient background information for self study and is ideal for students and professional researchers alike

Star Formation in Galaxy Evolution: Connecting Numerical Models to Reality Nickolay Y. Gnedin, Simon C. O. Glover, Ralf S. Klessen, Volker Springel, 2015-09-09 This book contains the elaborated and updated versions of the 24 lectures given at the 43rd Saas Fee Advanced Course Written by four eminent scientists in the field the book reviews the physical processes related to star formation starting from cosmological down to galactic scales It presents a detailed description of the interstellar medium and its link with the star formation And it describes the main numerical computational techniques designed to solve the equations governing self gravitating fluids used for modelling of galactic and extra galactic systems This book provides a unique framework which is needed to develop and improve the simulation techniques designed for

understanding the formation and evolution of galaxies Presented in an accessible manner it contains the present day state of knowledge of the field It serves as an entry point and key reference to students and researchers in astronomy cosmology and physics

**Star Formation** Mark R Krumholz,2017-05-11 Krumholz has a strong writing style didactic to be sure but also fairly conversational within the limits of the material While hardly casual reading this text would be a good resource for a stellar astrophysicist or any individual seeking to become one CHOICE This book provides a modern introduction to the study of star formation at a level suitable for graduate students or advanced undergraduates in astrophysics The first third of the book provides a review of the observational phenomenology and then the basic physical processes that are important for star formation The remainder then discusses the major observational results and theoretical models for star formation on scales from galactic down to planetary The book includes the recommendations for complementary reading from the research literature as well as five problem sets with solutions

**The Formation of Stars** Steven W. Stahler,Francesco Palla,2008-07-11 This book is a comprehensive treatment of star formation one of the most active fields of modern astronomy The reader is guided through the subject in a logically compelling manner Starting from a general description of stars and interstellar clouds the authors delineate the earliest phases of stellar evolution They discuss formation activity not only in the Milky Way but also in other galaxies both now and in the remote past Theory and observation are thoroughly integrated with the aid of numerous figures and images In summary this volume is an invaluable resource both as a text for physics and astronomy graduate students and as a reference for professional scientists

Introducing the Stars Martin Beech,2019-03-28 This textbook introduces the reader to the basic concepts and equations that describe stellar structure Various approximation techniques are used to solve equations and an intuitive rather than rigorous approach is employed to interpret the properties of the stars The book provides step by step instructions helpful exercises and relevant historical lessons to familiarize students with key concepts and mathematical theories Based upon a series of one semester 12 weeks elective undergraduate courses offered at the University of Regina this book is intended for students who are interested in seeing how basic calculus and introductory physics can be applied to the understanding of the stars from their formation to their death The text provides an intermediate stepping stone between lower level undergraduate classes and more specialized postgraduate texts on the subject of stellar structure

*Star Formation, Galaxies and the Interstellar Medium* Jose Franco,Federico Ferrini,G. TENORIO-TAGLE (Ed),1993-06-10 The enormously powerful phenomena of starbursts are examined in this book These spectacular star forming events are seen on large scales in some galaxies often triggered by galactic interactions An intriguing implication of starburst research is that active galactic nuclei AGN may not be powered by accreting black holes Instead theories are presented where compact powerhouses of dust enshrouded star formation lie at the core of AGN with supernovae exploding roughly once per year within massive nuclear concentrations of gas This book collects articles from a timely international conference in Elba Italy in 1992 these comprise a thorough review of the most important developments in galactic scale star formation

since the starburst revolution of the late 1980s This text will introduce graduate students to this exciting area and keep experts apace with rapid developments in it *Case Studies in Star Formation* Duncan MacKay, Mark Thompson, James Urquhart, 2023-04-13 *Case Studies in Star Formation* offers an overview of our current observational and theoretical understanding in the molecular astronomy of star formation The book is divided into six sections the first introduces an overview of star formation and the essential language concepts and tools specific to molecular astronomy studies Each subsequent section focuses on individual sources beginning with a description of large scale surveys The volume covers low and high mass star formation ionization and photodissociation regions and concludes with the extragalactic perspective Conventional textbooks begin with principles ending with a few convenient examples Through copious examples *Case Studies* reflects the reality of research which requires the creative matching of ongoing observations to theory and vice versa often raising as many questions as answers This supplementary study guide enables graduate students and early researchers to bridge the gap between textbooks and the wealth of research literature **Horizons** Michael A. Seeds, 1998 Accompanying CD ROM contains data on 118 000 stars and 13 000 deep sky objects with images a view of the universe 4 000 years ago to 8 000 years in the future 70 full motion sequences narrated videos and photos from NASA and Jet Propulsion Lab space missions From Dust To Stars Norbert S. Schulz, 2005-02-14 Studies of stellar formation in galaxies have a profound impact on our understanding of the present and the early universe The book describes complex physical processes involved in the creation of stars and during their young lives It illustrates how these processes reveal themselves from radio wavelengths to high energy X rays and gamma rays with special reference towards high energy signatures Several sections devoted to key analysis techniques demonstrate how modern research in this field is pursued **Morphology, Kinematics and Star Formation Across the Hubble Sequence of Galaxies** Santiago Erroz-Ferrer, 2015-11-21 This thesis discusses the evolution of galaxies through the study of the morphology kinematics and star formation properties of a sample of nearby galaxies The main body of the thesis describes the kinematic observations with the GHaFAS Fabry Perot instrument on the William Herschel Telescope of a sample of 29 spiral galaxies The work is closely related to the Spitzer Survey of Stellar Structure in Galaxies and uses the mid infrared data of that survey to determine key parameters of the galaxies studied From these data important results are obtained on streaming and other non circular motions in galaxies on the distribution and rates of star formation and on how correlations of these parameters and of the rotation curve shape with basic galaxy parameters yield clues on the evolutionary processes taking place in disk galaxies **The Origin of Stars and Planetary Systems** Charles J. Lada, N.D. Kylafis, 1999-07-31 *The Origin of Stars and Planetary Systems* is a collection of tutorial reviews that critically and systematically discuss the current state of our knowledge of star formation and early stellar evolution from the genesis of giant molecular clouds to the birth of young stars and their surrounding planetary systems The chapters are written at the graduate student level by a group of twenty internationally distinguished scientists The emphasis is on

fundamentals rather than recent research results The book thus provides a rigorous treatment of the basic empirical and theoretical foundations of modern star formation research The book is a unique reference based on the authors own pioneering research Readership Primary or supplementary text for graduate courses on star formation Basic reference for professional scientists needing a solid background in the area
