

Implementing "Starting Points": A Follow-Up Study

WILLIAM A. BORGEN

The article describes a follow-up study of the implementation of a group-based needs assessment program for unemployed people titled "Starting Points." The study was conducted using a focus group methodology that resulted in 916 statements from staff and clients involved with the program. The statements were categorized within 15 themes. The themes generated suggested that the program was successful in connecting clients with needed resources. They also pointed out the importance of the way in which clients were referred to the program and the availability of resources following completion of the program. Recommendations are made regarding future implementation of the program. The article concludes with questions raised by the study regarding the implementation of employment counseling interventions generally.

The purpose of this article is to describe a study that evaluated the effectiveness of *Starting Points*, a group-based needs assessment program designed to assist unemployed people to make informed choices about the types of assistance that they may find helpful in beginning the process of reconnecting with the labor market. The program was originally developed by Human Resources Development Canada for newly unemployed clients (Westwood, Amundson, & Borgen, 1994). It was subsequently adapted for income assistance recipients in British Columbia who had been out of work for at least a year (Borgen, 1995).

The British Columbia adaptation of the program was initially pilot tested in a rural, an urban, and a suburban community. Minor revisions were made based on experience with the pilots, and the program was introduced to eight other centers. Approximately 6 months later a follow-up study was initiated in nine communities across the province.

William A. Borgen is a professor in the Department of Counseling Psychology at the University of British Columbia. Funding for this study was provided by the Canadian Federal/British Columbia Provincial Assessment Counseling and Referral Strategic Initiative. The author thanks Bob Martin and Diane McLean from Human Resources Development Canada as well as Norm Amundson and Jeff Borgen for their assistance in conducting the study. Correspondence regarding this article should be sent to William A. Understanding SOA Security Design and Implementation Axel Buecker,Paul Ashley,Martin Borrett,Ming Lu,Sridhar Muppudi,Neil Readshaw,IBM Redbooks,2008-05-29 Securing access to information is important to any business Security becomes even more critical for implementations structured according to Service Oriented Architecture SOA principles due to loose coupling of services and applications and their possible operations across trust boundaries To enable a business so that its processes and applications are flexible you must start by expecting changes both to process and application logic as well as to the policies associated with them Merely securing the perimeter is not sufficient for a flexible on demand business In this IBM Redbooks publication security is factored into the SOA life cycle reflecting the fact that security is a business requirement and not just a technology attribute We discuss an SOA security model that captures the essence of security services and securing services These approaches to SOA security are discussed in the context of some scenarios and observed patterns We also discuss a reference model to address the requirements patterns of deployment and usage and an approach to an integrated security management for SOA This book is a valuable resource to senior security officers

Embedded Microprocessor System Design using FPGAs Uwe Meyer-Baese, 2025-05-29. This textbook for courses in Embedded Systems introduces students to necessary concepts through a hands on approach. It gives a great introduction to FPGA based microprocessor system design using state of the art boards, tools, and microprocessors from Altera, Intel, and Xilinx. HDL based designs, soft core parameterized cores (Nios II and MicroBlaze) and ARM Cortex A9 design are discussed, compared, and explored using many hand on designs, projects, and Custom IP for HDMI, color, floating point operations, and FFT. Bit swap, bit swap, and bit swap are developed, implemented, tested, and speed up is measured. New additions in the second edition include bottom up and top down FPGA based Linux OS system designs for Altera, Intel, and Xilinx boards, and application development running on the OS using modern, popular programming languages (Python, Java, and JavaScript). HTML, CSS, and Downloadable files include all design examples such as basic processor synthesizable code for Xilinx and Altera tools, for PicoBlaze, MicroBlaze, Nios II, and ARMv7 architectures in VHDL and Verilog code, as well as the custom IP projects. For the three new OS enabled programming languages, a substantial number of examples ranging from basic math and networking to image processing and video animations are provided. Each Chapter has a substantial number of short quiz questions, exercises, and challenging projects.
