## **The Clock Runs Backward:**

*The Clock Runs Backward* Carl Djerassi, 1991-01      Stochastic Processes in Quantum Physics Masao Nagasawa, 2012-12-06 Stochastic Processes in Quantum Physics addresses the question What is the mathematics needed for describing the movement of quantum particles and shows that it is the theory of stochastic in particular Markov processes and that a relativistic quantum particle has pure jump sample paths while sample paths of a non relativistic quantum particle are continuous Together with known techniques some new stochastic methods are applied in solving the equation of motion and the equation of dynamics of relativistic quantum particles The problem of the origin of universes is discussed as an application of the theory The text is almost self contained and requires only an elementary knowledge of probability theory at the graduate level and some selected chapters can be used as sub textbooks for advanced courses on stochastic processes quantum theory and theoretical chemistry      **Endophysics, Time, Quantum And The Subjective - Proceedings Of The Zif Interdisciplinary Research Workshop (With Cd-rom)** Metod Saniga, Rosolino Buccheri, Avshalom C Elitzur, 2005-10-03 Endophysics Time Quantum and the Subjective is the first systematic cross and trans disciplinary appraisal of the endophysical paradigm and its possible role in our understanding of Nature Focusing on three of the most pressing issues of contemporary science the interpretation of quantum theory the nature of time and the problem of consciousness it provides the reader with some forefront research concepts and ideas in these areas such as incessant Big Bang geometrizing of mental space times and a contextual view of quantum mechanics and or a view of the Universe as a self evolving quantum automaton Although primarily aimed at academics this engaging volume can be read by anyone interested in modern physics philosophy psychology and cognitive sciences      **Studies on the structure of time** R. Buccheri, Vito di Gesù, Metod Saniga, 2012-12-06 Every human being is aware of the flow of time This fact is embodied in the existence of such notions as the past and the future the two domains being separated from each other by the single moment of the present While the past is regarded as fixed and definite the future is viewed as unknown uncertain and undetermined The only perceivable moment is the present the now the ever changing point moving from the past into the future Physics tells us a different story not only are the vast majority of physical laws time reversible but the concept of the now itself has no place at all in physics In other words the equations of physics do not distinguish between the past and the future and seem to be completely oblivious to the very idea of the present This book discusses the biological and psychological aspects of perception of time and the problems related to the determination of location arising from quantum physics together with comments and opinions from philosophers and physicists      *Space, Time and Geometry* Patrick Suppes, 2013-03-09 The articles in this volume have been stimulated in two different ways More than two years ago the editor of Synthese Jaakko Hintikka announced a special issue devoted to space and time and articles were solicited Part of the reason for that announcement was also the second source of papers Several years ago I gave a seminar on special relativity at Stanford and

the papers by Domotor Harrison Hudgin Latzer and myself partially arose out of discussion in that seminar All of the papers except those of Grünbaum Fine the second paper of Friedman and the paper of Adams appeared in a special double issue of Synthese 24 1972 Nos 1 2 I am pleased to have been able to add the four additional papers mentioned in making the special issue a volume in the Synthese Library Of these four additional articles only the one by Fine has previously appeared in print Synthese 22 1971 448 481 its relevance to the present volume is apparent In preparing the papers for publication and in carrying out the various editorial chores of such a task I am very much indebted to Mrs Lillian O Toole for her extensive assistance

**INTRODUCTION** The philosophy of space and time has been of permanent importance in philosophy and most of the major historical figures in philosophy such as Aristotle Descartes and Kant have had a good deal to say about the nature of space and time

**Direction of Time** Sergio Albeverio, Philippe Blanchard, 2013-12-09 This edited book presents the problems of time and direction from an interdisciplinary point of view concentrating in particular on the following relations Time and physics Time philosophy and psychology Time mathematics and information theory It is a unique contribution by philosophers and scientists who are active in mathematics physics biology engineering information theory and psychology Questions such as the existence of a Big Bang the neurobiological basis regarding the coexistence of free will and determinism intercultural aspects of time mathematical models of time psychopathological features of time and micro reversibility versus macroscopic irreversibility are studied It also provides a truly interdisciplinary study of the problematic arrow of time

**Time, Space and Philosophy** Christopher Ray, 2002-09-11 This book provides a comprehensive up to date and accessible introduction to the philosophy of space and time Ray considers in detail the central questions of space and time which arise from the ideas of Zeno Newton Mach Leibniz and Einstein Time Space and Philosophy extends the debate in many areas absolute simultaneity is examined as well as black holes the big bang and even time travel Time Space and Philosophy will be invaluable to the student of philosophy and science and will be of considerable interest to mathematics students The clear non technical approach should also make it suitable for the general reader
