Methods and Resources for Elementary and Middle-school Social Studies James W. Stockard, 2001 **The Wire**, 2005 *Stargazing for Beginners* Will Gater, Anton Vamplew, 2020-11-05 Discover the wonders of the Universe with this complete introduction to observing and understanding the night sky This practical e guide explains and demystifies stargazing teaching you to recognize different kinds of objects and showing you how they move through the sky over the course of the night and the year It shows you how to understand and enjoy the cosmos building your practical astronomy skills from the basics to more advanced techniques Beginning with an explanation of the Universe itself how big is it what shape is it how old is it and will it end it then takes you on a tour around the night sky building up your knowledge in simple stages Practical advice begins with naked eye observations then illustrated step by step instructions show you how to set up and use binoculars and telescopes and how to take your own pictures of the night sky It also lets you take a closer look at the different objects you can view in the night sky telling you how to train your eye to recognize basic patterns of stars constellations and how to tell planets apart from other celestial bodies showing you how to observe them in an innovative step by step way An atlas of the night sky is also included with charts that can be used in both the northern and southern hemispheres throughout the year Accessible inspirational and authoritative *Stargazing for Beginners* will enthuse and inform anyone who wants to expand their knowledge of the night sky **The Complete CD Guide to the Universe** Richard Harshaw, 2007-09-06 This is without doubt the largest and most comprehensive atlas of the universe ever created for amateur astronomers It is the first major observing guide for amateurs since Burnham's *Celestial Handbook* With finder charts of large scale and unprecedented detail in both normal and mirror image views for users of the ubiquitous Meade and Celestron Schmidt Cassegrain telescope ranges and an extensive list of 14 000 objects it will provide a detailed observing guide for almost any practical amateur astronomer up to the most advanced Spanning some 3 000 pages this is a project that is possible only with Springer Extra Materials <http://extras.springer.com> The atlas covers the whole range of objects viewable by amateur astronomers with 8 to 11 inch telescopes from latitude approx 40 degrees The projected total number of objects is currently 13 238 compared with Burnham's approximately 5 000 double stars in three volumes This is much more than just a catalog of objects As planned the atlas will have about 270 double star images and sketches and 590 or so deep sky images and sketches Comparisons with other atlases are invidious but Tirion's atlas and *Uranometria* for example don't go as deep in magnitude and the scale is unsuitable for star hopping in the eyepiece where the action REALLY takes place The charts in the Complete CD Atlas of the Universe and the scale they are on allow the user to get enough detail to easily find the objects described In addition mirror image charts are supplied for instruments with reverse fields all SCTs This is also much more than planetarium software Many planetarium programs do not have good object databases and those that do have databases that are too large for practical field use For example TheSky one of the most popular and best programs can display the

entire Washington Double Star Catalog some 120 000 doubles but 90% of these are not resolvable or even viewable from certain horizons and there is no way to determine that by looking at the screen The result is that there are more objects plotted on the screen than you can actually see and the clutter makes it very hard to find what you want The pages on Springer Extra Materials are extensively indexed and referenced for quick location of objects areas classes of objects etc The accompanying book gives an introduction to the Atlas showcases the maps thus buyers can see what they are getting without visiting Springer Extra Materials describes the Springer Extra Materials content and organization and includes various appendices

Stargazing Sir Norman Lockyer, 1878 **A Stargazing Program for Beginners** Jamie Carter, 2015-11-20

Sets out a simple month by month program to reveal all of the night sky's biggest and most beautiful secrets in just one year and with only a few hours of stargazing each month By investing just an hour a week and 50 in binoculars it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever changing patterns and what they tell us about Earth the seasons and ourselves Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge science and travel writer Jamie Carter takes the reader on a 12 month tour of the night sky's incredible annual rhythms that say so much about Earth During the journey he learns about the celestial mechanics at work in the skies above that are to the beginner almost beyond belief As well as the vital constellations and clusters and the weird and wonderful nebulae he searches out dark sky destinations across the globe that help increase knowledge and give a new perspective on familiar night sky sights On the journey he witnesses a solar eclipse and grapples with star charts binoculars smartphone apps telescopes spots satellites and attempts basic astro photography By year's end the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing what time it is where all the planets are and even where the Galactic Center Point is

The Secret World of Stargazing Adrian West, 2021-11-25 A book that will make the night sky your lifelong passion An invitation to immerse yourself in the nature around you and the universe beyond Professor Brian Cox The Secret World of Stargazing is the ultimate astronomy book to set you on your epic journey around the cosmos it's a simple guide to the skies and makes stargazing fun easy and enjoyable for all absolutely no equipment is required Adrian West AKA the internet sensation VirtualAstro will take you through the seasons showing you exactly what you can spot in the sky throughout the year whether you're in your back garden or sitting on an exotic beach somewhere While you're learning how to spot constellations meteors and comets you will be switching off your busy mind sitting still in nature and paying attention to the small details that make up the big picture of life You'll finish reading this beautiful book and come away with a sense of grounding connection knowledge and a whole new appreciation of the sky above and the world outside your own it will soothe your soul An excellent readable bright guide to the night sky
