An Introduction to Universal Artificial Intelligence Marcus Hutter, David Quarel, Elliot Catt, 2024-05-28 An Introduction to Universal Artificial Intelligence provides the formal underpinning of what it means for an agent to act intelligently in an unknown environment. First presented in Universal Algorithmic Intelligence Hutter 2000 UAI offers a framework in which virtually all AI problems can be formulated and a theory of how to solve them. UAI unifies ideas from sequential decision theory, Bayesian inference, and algorithmic information theory to construct AIXI, an optimal reinforcement learning agent that learns to act optimally in unknown environments. AIXI is the theoretical gold standard for intelligent behavior. The book covers both the theoretical and practical aspects of UAI. Bayesian updating can be done efficiently with context tree weighting and planning can be approximated by sampling with Monte Carlo tree search. It provides algorithms for the reader to implement and experimental results to compare against. These algorithms are used to approximate AIXI. The book ends with a philosophical discussion of Artificial General Intelligence: Can super intelligent agents even be constructed? Is it inevitable that they will be constructed and what are the potential consequences? This text is suitable for late undergraduate students. It provides an extensive chapter to fill in the required mathematics, probability, information, and computability theory background. Machine Learning of Natural Language David

M.W. Powers,Christopher C.R. Turk,2012-12-06 We met because we both share the same views of language Language is a living organism produced by neural mechanisms relating in large numbers as a society Language exists between minds as a way of communicating between them not as an autonomous process The logical rules seem to us an epiphenomena of the neural mechanism rather than an essential component in language This view of language has been advocated by an increasing number of workers as the view that language is simply a collection of logical rules has had less and less success People like Yorick Wilks have been able to show in paper after paper that almost any rule which can be devised can be shown to have exceptions The meaning does not lie in the rules David Powers is a teacher of computer science Christopher Turk like many workers who have come into the field of AI Artificial Intelligence was originally trained in literature He moved into linguistics and then into computational linguistics In 1983 he took a sabbatical in Roger Shank's AI project in the Computer Science Department at Yale University Like an earlier visitor to the project John Searle from California Christopher Turk was increasingly uneasy at the view of language which was used at Yale
