**Jelly-fish, Star-fish and Sea-urchins** George John Romanes,1885 Among the most beautiful as well as the most common of the marine animals which are to be met with upon our coasts are the jelly fish and the starfish Scarcely any one is so devoid of the instincts either of the artist or of the naturalist as not to have watched these animals with blended emotions of the aesthetic and the scientific feeling the beauty while wondering at the organization How many of us who live for most of the year in the fog and dust of large towns enjoy with the greater zest our summer s holiday at the seaside And in the memories of most of us is there not associated with the picture of breaking waves and sea birds floating indifferently in the blue sky or on the water still more blue the thoughts of many a ramble among the weedy rocks and living pools where for the time being we all become naturalists and where those who least know what they are likely to find in their search are most likely to approach the keen happiness of childhood If so the image of the red sea stars bespangling a mile of shining sand or decorating the darkness of a thousand grottoes must be joined with the image no less vivid of those crystal globes pulsating with life and gleaming with all the colours of the rainbow which are perhaps the most strange and certainly in my estimation the most delicately lovely creatures in the world Introduction PsycINFO Database Record c 2010 APA all rights reserved
