Statistical Analysis of Network Data Eric D. Kolaczyk, 2009-04-20 In recent years there has been an explosion of network data that is measurements that are either of or from a system conceptualized as a network from seemingly all corners of science The combination of an increasingly pervasive interest in scientific analysis at a systems level and the ever growing capabilities for high throughput data collection in various fields has fueled this trend Researchers from biology and bioinformatics to physics from computer science to the information sciences and from economics to sociology are more and more engaged in the collection and statistical analysis of data from a network centric perspective Accordingly the contributions to statistical methods

and modeling in this area have come from a similarly broad spectrum of areas often independently of each other. Many books already have been written addressing network data and network problems in specific individual disciplines. However, there is at present no single book that provides a modern treatment of a core body of knowledge for statistical analysis of network data that cuts across the various disciplines and is organized rather according to a statistical taxonomy of tasks and techniques. This book seeks to fill that gap and as such it aims to contribute to a growing trend in recent years to facilitate the exchange of knowledge across the pre-existing boundaries between those disciplines that play a role in what is coming to be called network science.

*Next Generation Internet* Joel Mambretti, Andrew Schmidt, 1999-09-10 A guide to understanding the emerging technologies and services of the new Internet. The groundwork for the next generation Internet (NGI) is rapidly being laid and now it's only a matter of time before a truly universal, fully interactive multimedia Information Superhighway is realized. Many organizations are already connecting to powerful new Internet services. Enabling the seamless convergence of communications and computation, the next version of the Internet will be no mere upgrade; it will be based on a communications technology revolution. Written by Joel Mambretti and Andrew Schmidt, who have been intimately involved with the development of the next generation Internet, this book helps you to understand and prepare for the internetworking revolution. The authors explain why we need a next generation Internet and discuss the crucial design issues we face from the application, technical, and network services perspectives. They also explore in detail the enabling technologies behind the next generation Internet. Writing for both corporate decision makers and the technical community, they present Architecture, Services, and service management; Core protocols and technologies; Standards, governance, and ongoing partnerships; Differentiated Services; GigaPOPs; National and international pilot programs, both active and planned; International next generation Internet projects; Universal accessibility; Advanced Internet applications.
