Isabel Norris has never left the ice Her father was a hockey legend who died before she was born and her grandparents have raised her in his skates When Iz leaves her grandmother behind to play for the Winnipeg University Scarlets she struggles to fit in on this team of hard hitting tough talking women with a penchant for buffets beer bong and raunchy humour and a fierce loyalty to one another and to their sport But in their raucousmidst Iz can t quite find her own place in the game As she moves between the rowdy hilarity of the Scarlets dressing room and quiet lyrical contemplations Iz tries to navigate the ways loss plays out on the ice Based largely on author Cara Hedley s three seasons on the University of Manitoba Bison Twenty Miles celebrates women s hockey and offers an uncompromising look at the ways in which the sport both haunts and redeems the women who play it A work of literary fiction that is surprisingly touching honest engaging and unusual both in terms of its subject matter and perspective Hedley stickhandles her way around Iz s conundrum with beautiful agility using deftly lyrical prose and insight to describe the rough and tumble of a hard hitting game and the harsh realities of life

KEY BENEFIT This book presents a comprehensive discussion of international children s books and their use in K 8 classrooms KEY TOPICS Global Perspectives in Children s Literature reviews the status of children s literature around the world and elaborates on the benefits of international children s literature for children s development and the curriculum The book presents various genres such as picture books fiction informational books and poetry Issues in the field and criteria for selecting books to be used in the classroom are provided as well as a discussion of history and contemporary trends worldwide Specific ways to share international books are also presented as they relate to theme studies specific content areas visual literacy and language arts Useful for anyone interested in global education specifically that of Children s Literature **The Physical Basis of Mind ...** George Henry Lewes,1877 This volume is restricted to the group of material conditions which constitute

the organism in relation to the physical world a group which furnishes the data for one half of the psychologist's quest the other half being furnished by historical and social conditions The Human Mind so far as it is accessible to scientific inquiry has a twofold root man being not only an animal organism but an unit in the social organism and hence the complete theory of its functions and faculties must be sought in this twofold direction One leading object of the following pages has been everywhere to substitute the biological point of view for the metaphysical and mechanical points of view which too often obstruct research the one finding its expression in spiritualist theories the other in materialist theories both disregarding the plain principle that the first requisite in a theory of biological phenomena must be to view them in the light of biological conditions Another object has been to furnish the reader uninstructed in physiology with such a general outline of the structure and functions of the organism and such details respecting the sentient mechanism as may awaken an interest in the study and enable him to understand the application of Physiology to Psychology The volume contains four essays The first on the Nature of Life deals with the specialty of organic phenomena as distinguished from the inorganic The second essay is on the Nervous Mechanism setting forth what is known and what is inferred respecting the structure and properties of that all important system The third essay treats of Animal Automatism Here the constant insistence on the biological point of view while it causes a rejection of the mechanical theory admits the fullest recognition of all the mechanical relations involved in animal movements and thus endeavors to reconcile the contending schools In the final essay the Reflex Theory is discussed and here once more the biological point of view rectifies the error of an analysis which has led to the denial of Sensibility in reflex actions because that analysis has overlooked the necessary presence of the conditions which determine Sensibility
