[Physical Chemistry for Engineering and Applied Sciences](#) Frank R. Foulkes, 2012-09-12 *Physical Chemistry for Engineering and Applied Sciences* is the product of over 30 years of teaching first year Physical Chemistry as part of the Faculty of Applied Science and Engineering at the University of Toronto. Designed to be as rigorous as compatible with a first year student's ability to understand, the text presents detailed step by step derivations of the equations that permit the student to follow the underlying logic and of equal importance to appreciate any simplifying assumptions made or mathematical tricks employed. In addition to the 600 exercises and end of chapter problems, the text is rich in worked non-trivial examples, many of which are designed to be inspiring and thought provoking. Step by step derivation of all equations enables the student to smoothly follow the derivation by sight and can be understood relatively easily by students with moderate skills and backgrounds in mathematics. Clear and accessible *Physical Chemistry for Engineering and Applied Sciences* includes: The answers to all of the 112 worked examples, 99 exercises following many of the worked examples, and 496 end of chapter problems. Topics not normally seen in introductory physical chemistry textbooks: ionic reaction rates, activities and activity coefficients, or not regularly explained in much detail: electrochemistry, chemical kinetics, with an eye on industrial applications. Special appendices that provide detailed explanations of basic integration and natural logarithms for students lacking a background in integral calculus. An in depth chapter on electrochemistry in which activities and activity coefficients are used extensively as required for accurate calculations.
