Ecological Systems and the Environment Theodore C. Foin, 1976 **Ecological Systems and the Environment** Foin, Theodore C. Foin, 1976 **Ecological Systems** Rik Leemans, 2012-12-12 Earth is home to an estimated 8 million animal species 600 000 fungi 300 000 plants and an undetermined number of microbial species Of these animal fungal and plant species an estimated 75% have yet to be identified Moreover the interactions between these species and their physical environment are known to an even lesser degree At the same time the earth's biota faces the prospect of climate change which may manifest slowly or extremely rapidly as well as a human population set to grow by two billion by 2045 from the current seven billion Given these major ecological changes we cannot wait for a complete biota data set before assessing planning and acting to preserve the ecological balance of the earth This book provides comprehensive coverage of the scientific and engineering basis of the systems ecology of the earth in 15 detailed peer reviewed entries written for a broad audience of undergraduate and graduate students as well as practicing professionals in government academia and industry The methodology presented aims at identifying key interactions and environmental effects and enabling a systems level understanding even with our present state of factual knowledge *The Ecosystem Approach* David Waltner-Toews, James J. Kay, Nina-Marie E. Social-Ecological Resilience and Law Ahjond S. Garmestani, Craig R. Allen, 2014-02-25 Environmental law envisions ecological systems as existing in an equilibrium state or a balance of nature reinforcing a rigid legal framework unable to absorb rapid environmental changes and innovations in sustainability For the past three decades resilience theory which embraces uncertainty and nonlinear dynamics in complex adaptive systems has shown itself to be a robust and invaluable basis for sound environmental management Reforming American law to account for this knowledge is key to transitioning to sustainability This volume features top legal and resilience scholars speaking on resilience theory and its legal applications to climate change biodiversity national parks and water law

Social-Ecological Transformation Karl Bruckmeier, 2016-06-03 This book advances a social ecological theory to reconnect nature and society through sustainable transformation of interacting social and ecological systems Social ecology develops as an interdisciplinary science by using knowledge from the social sciences especially sociology and economics and from natural scientific ecology Knowledge integration across the boundaries of social and natural sciences is not widespread blocked by the specialisation of theories and their competing forms of explanation and interpretation Chapters in this book describe a new social ecological theory that connects concepts and theories from both sides to create a new interdisciplinary theory Inter and transdisciplinary knowledge synthesis creates possibilities to analyse global environmental problems more systematically by integrating specialized research on environmental problems The author uses social ecological theory to analyse and explain problems and processes of global change in modern society such as climate change and adaptation to it ecosystem change and transformation of the industrial energy regime finally offering pathways of transformation to a future sustainable society

Navigating Social-Ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability

A New Ecology Soeren Nors Nielsen, Brian D. Fath, Simone Bastianoni, Joao C. Marques, Felix Muller, Bernard D. Patten, Robert E. Ulanowicz, Enzo Tiezzi, 2019-08-30 A New Ecology Systems Perspective Second Edition gives an overview of the commonalities of all ecosystems from a variety of properties including physical openness ontic openness directionality connectivity a complex dynamic for growth and development and a complex dynamic response to disturbances Each chapter details basic and characteristic properties that help the reader understand how they can be applied to explain a wide spectrum of current ecological research and environmental management applications

Contains revised updated or redeveloped chapters that include the most current research and technology Reviews universal traits of ecosystems from multiple perspectives giving the reader a complete overview of the systems perspective of ecology Offers broad examples of ecology as a systems science from the history of science to philosophy and the arts Brings together the systems perspective in a framework of four columns for greater understanding including thermodynamics network theory hierarchy theory and biochemistry Contains new chapter on the application of the theory to environmental management

Innovation and Knowledge in Agri-food and Environmental Systems Alessio Cavicchi, Francesco Caracciolo, Maria Crescimanno, Maria De Salvo, Antonino Galati, Antonio Seccia, Laura Secco, 2024-12-16 This book contains selected papers from the LVIII Conference of the Italian Association of Agricultural Economists which was held in Palermo Italy from 29 to 30 September 2022 The chapters discuss challenges and opportunities under the turbulent socio economic and political situation caused by the COVID 19 pandemic and the ongoing conflict between Russia and Ukraine It includes topics such as assessment methods and tools for governance of natural resources ecological and digital transition in agriculture agri food and forest companies markets and consumer analysis recovery and resilience in rural areas as well as strategies for the creation of sustainable value chains in agri food and forest sectors *Environmental Management Handbook, Second Edition - Six Volume Set* Sven Erik Jorgensen, Brian D.
