Deep Core Studies of the Crystal Structure and Fabrics of Antarctic Glacier Ice Anthony J. Gow, 1970 Radical differences in the crystal structure and fabrics of glacier ice cores at Byrd Station and Little America V Antarctica are attributed to gross differences in the thermal and deformational histories of the ice at these two locations At Byrd Station the mean size of crystals increased more than sixfold between 65 meters and the bottom of the drill hole at 309 meters Crystal size was also found to increase linearly with the age of the ice thus simulating isothermal grain growth in metals However this growth was not accompanied by any dimensional orientation of crystals or entrapped bubbles or by any significant increase in the degree of preferred orientation of crystallographic c axes These observations imply that negligible shearing is occurring in the top 300 meters of the thick grounded ice sheet at Byrd Station By contrast very considerable deformation is indicated for the floating 258 m thick Ross Ice Shelf at Little America This deformation is characterized by the widespread occurrence of strained crystals below 65 meters the existence of elongated oriented bubbles between 95 meters and 130 meters and the attainment of pronounced crystal orientation multiple maxima fabrics by 100 meters depth Exaggerated growth of crystals below 150 meters is attributed to increasing temperatures in the ice shelf The crystal structure of these cores clearly demonstrates that glacial ice only is present in the Ross Ice Shelf at Little America V Author

Report of Investigations, 1962 **Silicon Chemical Etching** J. Grabmaier, 2012-12-06 In the first contribution to this volume we read that the world wide production of single crystal silicon amounts to some 2000 metric tons per year Given the size of present day silicon crystals this number is equivalent to 100000 silicon crystals grown every year by either the Czochralski 80% or the floating zone 20% technique But to the best of my knowledge no coherent and comprehensive article has been written that deals with the art and science as well as the practical and technical aspects of growing silicon crystals by the Czochralski technique The same could be said about the floating zone technique were it not for the review article by W Dietze W Keller and A Mißbauer which was published in the preceding Volume 5 Silicon of this series and for a monograph by two of the above authors published about the same time As editor of this volume I am very glad to have succeeded in persuading two scientists W Zulehner and D Huber of Wacker Chemitronic GmbH the world's largest producer of silicon crystals to write a comprehensive article about the practical and scientific aspects of growing silicon crystals by the Czochralski method and about silicon wafer manufacture I am sure that many scientists or engineers who work with silicon

crystals be it in the laboratory or in a production environment will profit from the first article in this volume

Kaoru Yamafuji,Tadataka Morishita,2012-12-06 The field of high temperature superconductivity has encouraged an interdisciplinary approach to research It has required significant cooperation and collaboration among researchers each of whom has brought to it a rich variety of experience from many other fields Recently great improvements have been made in the quality of research The subject has matured and been launched into the next stage through the resonance between science and technology The current progress of materials processing and engineering in this field is analogous to that previously seen in the development of semiconductors These include the appearance of materials taking the place of YBa₂Cu₃O₇ owing to their improved properties higher critical temperatures and stronger flux pinning in which rare earth ions with large radii La Nd Sm substitute for Y the development of technology enabling growth control on the nanometer scale and precise and reproducible measurements that can be used as rigorous tests of theoretical models which in turn are expected to lead to the development of new devices For further progress in high T research academics and technologists must pool their knowledge and experience I hope that this volume will promote that goal by providing the reader with the latest results of high temperature superconductor research and will stimulate further discussion and collaboration **Nature** Sir Norman Lockyer,1891 **The Housewife** ,1886 **Quarterly Journal of the Chemical Society of London** Chemical Society (Great Britain),1877 **Haydn's Dictionary of Dates and Universal Information Relating to All Ages and Nations** Joseph Haydn,1893 *The Quarterly Journal of Pure and Applied Mathematics* James Joseph Sylvester,1860 **First Proofs of the Universal Catalogue of Books on Art,** National Art Library (Great Britain),1870 *Journal of the Royal Geological Society of Ireland* Royal Geological Society of Ireland,1873 **The Eclectic Magazine of Foreign Literature, Science, and Art** ,1892 *The History of Mount Mica of Maine, U.S.A. and Its Wonderful Deposits of Matchless Tourmalines* Augustus Choate Hamlin,1895 **Natural Philosophy ...** William James Rolfe,1874 **Journal of the Royal Society of Arts** Royal Society of Arts (Great Britain),1883 *The Dublin University Magazine* ,1877 **A Vibrationally**
