country specific governance dilemmas which relate to specific state traditions and institutional characteristics of national water management but also uncovers interesting similarities which provide us with building blocks to formulate more generic lessons about the governance of Making Space for the River in different institutional and social contexts. The authors of this book come from a variety of disciplines including public administration, town and country planning, geography and anthropology, and these different disciplines bring multiple ways of knowing and understanding of Making Space for the River programs. The book combines interdisciplinary scientific analyses of Space for the River projects and programs with practical knowing and lessons drawing Making Space for the River is written for both practitioners and scholars and students of environmental policy, spatial planning, land use and water management. [The Galaxy](#) William Conant Church, 1876. [Conceptions of Cosmos](#) Helge S. Kragh, 2006-12-07. This book is a historical account of how natural philosophers and scientists have endeavoured to understand the universe at large first in a mythical and later in a scientific context. Starting with the creation stories of ancient Egypt and Mesopotamia the book covers all the major events in theoretical and observational cosmology from Aristotle's cosmos over the Copernican revolution to the discovery of the accelerating universe in the late 1990s. It presents cosmology as a subject including scientific as well as non-scientific dimensions and tells the story of how it developed into a true science of the heavens. Contrary to most other books in the history of cosmology it offers an integrated account of the development with emphasis on the modern Einsteinian and post-Einsteinian period. Starting in the pre-literary era it carries

the story onwards to the early years of the 21st century

LaViolette,2004-04-15 Provides compelling evidence that creation myths from the dawn of civilization correspond to cutting edge astronomical discoveries Exposes the contradictions in current cosmological theory and offers a scientific basis for the ancient myths and esoteric lore that encode a theory of continuous creation By the scientist who was the first to disprove the Big Bang theory on the basis of observational data Recent developments in theoretical physics including systems theory and chaos theory are challenging long held mechanistic views of the universe Many thinkers have speculated that the remnants of an ancient science survive today in mythology and esoteric lore but until now the scientific basis for this belief has remained cloaked in mystery Paul LaViolette reveals the remarkable parallels between the cutting edge of scientific thought and creation myths from the dawn of civilization With a scientific sophistication rare among mythologists LaViolette deciphers the forgotten cosmology of ancient lore in a groundbreaking scientific tour de force In direct nontechnical language he shows how these myths encode a theory of cosmology in which matter is continually growing from seeds of order that emerge spontaneously from the surrounding subquantum chaos Exposing the contradictions that bedevil the big bang theory LaViolette offers both the specialist and the general reader a controversial and highly stimulating critique of prevailing misconceptions about the seldom questioned superiority of modern science over ancient cosmology By restoring and reanimating this ancient scientific worldview Genesis of the Cosmos leads us beyond the restrictive metaphors of modern science and into a new science for the 21st century
