The Crippen File:

The Crippen File, 1985-01 *Doing Global History* Roland Wenzlhuemer, 2019-10-31 The field of Global History has experienced an unprecedented boom in the last two decades and carved itself deeply into the practice of historical research. Despite this, its conceptual foundations have rarely been explored. This introduction to what Global History is brings together theory and practice with 6 key concepts delivered through 6 accessible case studies. Re-evaluating the central concerns and key approaches in the field, it offers an up-to-date discussion of the foundations of Global History, its guiding questions and principal methods at work. *Doing Global History* offers students valuable insights into the ways general concepts can be used and applied when doing historical research. The 6 concepts—connections, actors, structures, space, time, and transit—and their accompanying examples will not only help readers to get a solid grasp of what global history means but will stimulate further engagement in the field. Wenzlhuemer successfully shows that global history is best considered as a perspective, not a theory or paradigm, and guides the reader through ways it can be used in practice to draw new and exciting conclusions. Tailored for classroom and student use, this book will be invaluable to advanced undergraduates and postgraduates of Global History.

A History of Forensic Science Alison Adam, 2015-11-19 How and when did forensic science originate in the UK? This question demands our attention because our understanding of present-day forensic science is vastly enriched through gaining an appreciation of what went before. *A History of Forensic Science* is the first book to consider the wide spectrum of influences which went into creating the discipline in Britain in the first part of the twentieth century. This book offers a history of the development of forensic sciences centred on the UK but with consideration of continental and colonial influences from around 1880 to approximately 1940. This period was central to the formation of a separate discipline of forensic science with a distinct professional identity, and this book charts the strategies of the new forensic scientists to gain an authoritative voice in the courtroom and to forge a professional identity in the space between forensic medicine, scientific policing, and independent expert witnessing. In so doing, it improves our understanding of how forensic science developed as it did. This book is essential reading for academics and students engaged in the study of criminology, the history of forensic science, science and technology studies, and the history of policing.

Murder Cases of the Twentieth Century David K. Frasier, 2024-10-14 From Jack Henry Abbott who stabbed a waiter through the heart for not allowing him to use the toilet to the Zodiac, an unknown California serial killer who may have murdered as many as 37 people, this reference work details 280 of the most famous murder cases of the twentieth century. Each entry contains, when applicable, birth and death dates, aliases, occupation, location of the murders, weapons used, number of victims, and the time period when the killings occurred. Films, plays, television shows, videos, and audio programs based on or inspired by the case are then cited, followed by a brief overview of the murder case and a bibliography of English language works related to it.
