Lucas, 2010-06-01 You know that servers have log files and performance measuring tools and that traditional network devices have LEDs that blink when a port does something You may have tools that tell you how busy an interface is but mostly a network device is a black box Network Flow Analysis opens that black box demonstrating how to use industry standard software and your existing hardware to assess analyze and debug your network Unlike packet sniffers that require you to reproduce network problems in order to analyze them flow analysis lets you turn back time as you analyze your network You ll learn how to use open source software to build a flow based network awareness system and how to use network analysis and auditing to address problems and improve network reliability You ll also learn how to use a flow analysis system collect flow records view filter and report flows present flow records graphically and use flow records to proactively improve your network Network Flow Analysis will show you how to Identify network server router and firewall problems before they become critical Find defective and misconfigured software Quickly find virus spewing machines even if they re on a different continent Determine whether your problem stems from the network or a server Automatically graph the most useful data And much more Stop asking your users to reproduce problems Network Flow Analysis gives you the tools and real world examples you need to effectively analyze your network flow data Now you can determine what the network problem is long before your customers report it and you can make that silly phone stop ringing

**Active Networks and Active Network Management** Stephen F. Bush, Amit B. Kulkarni, 2006-04-11 Active networking is an exciting new paradigm in digital networking that has the potential to revolutionize the manner in which communication takes place It is an emerging technology one in which new ideas are constantly being formulated and new topics of research are springing up even as this book is being written This technology is very likely to appeal to a broad spectrum of users from academia and industry Therefore this book was written in a way that enables all these groups to understand the impact of active networking in their sphere of interest Information services managers network administrators and e commerce developers would like to know the potential benefits of the new technology to their businesses networks and applications The book introduces the basic active networking paradigm and its potential impacts on the future of information handling in general and on communications in particular This is useful for forward looking businesses that wish to actively participate in the development of active networks and ensure a head start in the integration of the technology in their future products be they applications or networks Areas in which active networking is likely to make significant impact are identified

and the reader is pointed to any related ongoing research efforts in the area. The book also provides a deeper insight into the active networking model for students and researchers who seek challenging topics that define or extend frontiers of the technology. It describes basic components of the model, explains some of the terms used by the active networking community, and provides the reader with taxonomy of the research being conducted at the time this book was written. Current efforts are classified based on typical research areas such as mobility, security, and management. The intent is to introduce the serious reader to the background regarding some of the models adopted by the community, to outline outstanding issues concerning active networking, and to provide a snapshot of the fast-changing landscape in active networking research. Management is a very important issue in active networks because of its open nature. The latter half of the book explains the architectural concepts of a model for managing active networks and the motivation for a reference model that addresses limitations of the current network management framework by leveraging the powerful features of active networking to develop an integrated framework. It also describes a novel application enabled by active network technology called the Active Virtual Network Management Prediction (AVNMP) algorithm. AVNMP is a proactive management system; in other words, it provides the ability to solve a potential problem before it impacts the system by modeling network devices within the network itself and running that model ahead of real time.
