THE MOON

Fun Facts

The Moon is 237,739 miles from Earth.

A lunar eclipse is when Earth comes between the Sun and the moon, blocking sunlight from falling on the Moon.

The Moon is Earth's only natural satellite.

The Moon always shows the same face because Earth and the Moon are in synchronous rotation.

The Moon is 400 times closer to Earth but 400 times smaller than the Sun.

The Moon The Solar System:

Earth, Moon, and Planets Fred Lawrence Whipple, 1968 The increase in our knowledge of the solar system during the five years since the author last revised this book 1963 greatly exceeds that in the previous two decades The program of the U S National Aeronautics and Space Administration and the space program of the U S S R have been prime contributors to this rapid progress but the impetus has carried over to groundbased studies of the Moon and planets as well The advances in radio and radar astronomy alone are striking and are continuing at an accelerating pace This third edition of Mr Whipple s popular and authoritative book is thoroughly revised in light of this new knowledge The most extensive revisions are in the chapters on the Moon Mars and Venus the members of the solar system on which the various space programs have concentrated The author has included many new and dramatic illustrations in this third edition among them photographs taken from U S and Russian space craft There are striking photographs of the Moon with close up views of its surface texture pictures of Mars taken from Mariner IV and radar pictures of Venus that see through that planet s obscuring cloud layer The book is written in nontechnical language and with a lucid witty style that is readily understandable to the interested layman Mathematics has been avoided and scientific methods and processes are described in simple terms In presenting the latest information about the planets and their moons Mr Whipple discusses their origin and evolution motions atmospheres temperatures surface conditions the environment essential for life as we know it and the possibilities of life outside the Earth He concludes with a discussion of current theories about the origin of the solar system

Michael Carroll, 2019-10-23 Although there is a chance that certain planets may be habitable for life the moons of planets might have even more to offer The icy moons of Jupiter Saturn Uranus and Neptune have taught us important lessons about new volcanic forms cryovolcanism and the bizarre landscapes sculpted by those erupting geysers Glaciers ice mountains and vast canyons mold the faces of these worlds of ice and thunder Yet many ice moons and dwarf planets including Ceres and Pluto are in fact sea worlds hiding deep oceans beneath their ice crusts This book explores the frozen worlds beyond Mars delving into the interior forces of migrating ice diapirs seafloor volcanism and tidal friction which help form the landscapes found above and biologically friendly environs buried below It covers the latest research in the field and includes interviews with today s foremost authorities including astrobiologists Chris McKay NASA Ames Ralph Lorenz Johns Hopkins Applied Physics Laboratory and Karl Mitchell Jet Propulsion Laboratory Original art by the author enhances the concepts explored in the text recreating some of the most remarkable landscapes on icy planets and moons

James A. moons and finally to a list of less notable ones All the major moons of the gas giant planets are covered in great detail while the lesser known satellites of these worlds are also touched on Readers will learn of the remarkable trans Neptunian Objects Pluto Eris Sedna Quaoar including many of those that have been given scant attention in the literature More than just objects to read about the planets satellites provide us with important information about the history of the solar system Projects to help us learn more about the moons are included throughout the book Most amateur astronomers can name some of the more prominent moons in the solar system but few are intimately familiar with the full variety that exists in our backyard 146 and counting As our understanding of the many bodies in our solar system broadens this is an invaluable tour of our expanding knowledge of the moons both near and far *Discover! Moons of the Solar System John Stewart,2012-11-07 The first half of this book is devoted to earth s moon General statistical data are followed by such subjects as eclipses spacecraft landings phenomena mapping and the hundreds of small and large surface features with the sources of their names The second half is about the 70 other known moons of the solar system with size discovery date and other data There are 7 appendices and 62 photographs 18 in color

Magnetotails in the Solar System Andreas Keiling,Caitríona Jackman,Peter Delamere,2015-02-02 All magnetized planets in our solar system Mercury Earth Jupiter Saturn Uranus and Neptune interact strongly with the solar wind and possess well developed magnetotails It is not only the strongly magnetized planets that have magnetotails Mars and Venus have no global intrinsic magnetic field yet they possess induced magnetotails Comets have magnetotails that are formed by the draping of the interplanetary magnetic field In the case of planetary satellites moons the magnetotail refers to the wake region behind the satellite in the flow of either the solar wind or the magnetosphere of its parent planet The largest magnetotail of all in our solar system is the heliotail the magnetotail of the heliosphere The variety of solar wind conditions planetary rotation rates ionospheric conductivity and physical dimensions provide an outstanding opportunity to extend our understanding of the influence of these factors on magnetotail processes and structures Volume highlights include Discussion on why a magnetotail is a fundamental problem of magnetospheric physics Unique collection of tutorials on a large range of magnetotails in our solar system In depth reviews comparing magnetotail processes at Earth with other magnetotail structures found throughout the heliosphere Collectively Magnetotails in the Solar System brings together for the first time in one book a collection of tutorials and current developments addressing different types of magnetotails As a result this book should appeal to a broad community of space scientists and it should also be of interest to astronomers who are looking at tail like structures beyond our solar system

Energy Resources for Human Settlement in the Solar System and Earth's Future in Space William A. Ambrose,James F. Reilly II,Douglas C. Peters,2013-03-14 The book's purpose is to provide the quantitative foundation for beginning to think about developing energy and minerals outside of Earth's atmosphere that are necessary to support scientific missions space and extra terrestrial scientific stations and permanent colonies and ultimately expand Earth's economy beyond the near earth environment to include space resources We cannot envision a situation where all resources required for future space activities are exported from Earth therefore this book clearly illustrates that an effective economy is possible beyond Earth's surface when we consider the resources available in near Earth space Our first audience is members of AAPG American Institute of Mining Metallurgical and Petroleum Engineers AIME and other professionals engaged in energy and resource development As energy professionals we are concerned on a daily basis with providing the necessary energy and minerals required for our growing world population and the increasing standard of living that comes with ample energy availability And more than anything else AAPG members are explorers We are the professionals who have pushed back the boundaries of our resource base from capturing petroleum resources from surface seeps to drilling onshore wells to extract oil and gas and to venturing offshore into increasingly difficult and hostile environments to supply the cheap and abundant energy made available by our advances in technology There are more similarities than differences between deepwater exploration and development and space exploration Beyond our own members however our audience is every rational human being who understands human health and well being quality of life education and freedom are dependent on the energy and minerals that support our advanced civilization Space is the next frontier and as the world civilization expands beyond Earth's surface we hope this publication serves to illustrate there are abundant opportunities to support and maintain and in fact allow to prosper civilization's expansion into space Publisher's website *In Quest of the Solar System* Theo Koupelis,2010-02-04 Available with WebAssign Author Theo Koupelis has set the mark for a student friendly accessible introductory astronomy text with *In Quest of the Universe* He has now developed a new text to accommodate those course that focus mainly on planets and the solar system Ideal for the one term course *In Quest of the Solar System* opens with material essential to the introductory course gravity light telescopes the sun and then moves on to focus on key material related to our solar system
