The Moon Myth Magic And Fact:

The Moon & the Western Imagination Scott L. Montgomery, 1999 The Moon is at once a face with a thousand expressions and the archetypal planet Throughout history it has been gazed upon by people of every culture in every walk of life From early perceptions of the Moon as an abode of divine forces humanity has in turn accepted the mathematized Moon of the Greeks the naturalistic lunar portrait of Jan van Eyck and the telescopic view of Galileo Scott Montgomery has produced a richly detailed analysis of how the Moon has been visualized in Western culture through the ages revealing the faces it has presented to philosophers writers artists and scientists for nearly three millennia To do this he has drawn on a wide array of sources that illustrate mankind's changing concept of the nature and significance of heavenly bodies from classical antiquity to the dawn of modern science Montgomery especially focuses on the seventeenth century when the Moon was first mapped and its features named From literary explorations such as Francis Godwin's *Man in the Moone* and Cyrano de Bergerac's *L'autre monde* to Michael Van Langren's textual lunar map and Giambattista Riccioli's *Almagestum novum* he shows how Renaissance man was moved by the lunar orb how he battled to claim its surface and how he in turn elevated the Moon to a new level in human awareness The effect on human imagination has been cumulative our idea of the Moon and therefore the planets is multilayered and complex having been enriched by associations played out in increasingly complicated harmonies over time We have shifted the way we think about the lunar face from a perfect body to an earthlike one with corresponding changes in verbal and visual expression Ultimately Montgomery suggests our concept of the Moon has never wandered too far from the world we know best the Earth itself And when we finally establish lunar bases and take up some form of residence on the Moon's surface we will not be conquering a New World fresh and mostly unknown but a much older one ripe with history

The Moon Diana Brueton, 1991 This spectacularly illustrated volume celebrates the varied influence of the moon throughout human history from the fantastic superstitions about The Man in the Moon to our overwhelming feelings of awe as Neil Armstrong took that historic first step on the moon's surface

Many Moons Diana Brueton, 1992-10 This lavishly illustrated fact and fiction filled book explores aspects of the moon such as Moon goddesses the moon's place in astrology and ancient rites the moon's effects on Earth scientific facts about the moon itself the future of moon travel and more Includes an introduction by Col James Irwin one of the 12 Apollo astronauts to walk on the moon 250 photographs and illustrations many in color
