The Moons Of Our Solar System:

Our Solar System , **Moons, Moons and More Moons! All Moons of our Solar System - Space for Kids - Children's Aeronautics & Space Book** Baby Professor,2017-02-15 Did you know that the Earth s moon is not unique in the Solar System Other planets have numerous moons and ours is only one Learn about the most distinguishing characteristics of the many moons in our Solar System Read this book to spot their differences and similarities in appearance and functions too Grab a copy today **The Moons of Our Solar System** David C. Knight,1980 Discusses the possible origins composition and characteristics of the natural satellites in the solar system Incorporates data from the Voyager and Pioneer flights

Moons: A Very Short Introduction David A. Rothery,2015-11-26 Proving to be both varied and fascinating moons are far more common than planets in our Solar System Our own Moon has had a profound influence on Earth not only through tidal effects but even on the behaviour of some marine animals Many remarkable things have been discovered about the moons of the giant outer planets from Voyager Galileo Cassini and other spacecraft Scientists have glimpsed volcanic activity on Io found oceans of water on Titan and captured photos of icy geysers bursting from Enceladus It looks likely that microbial life beyond the Earth may be discovered on a moon rather than a planet In this Very Short Introduction David Rothery introduces the reader to the moons of our Solar System beginning with the early discoveries of Galileo and others describing their variety of mostly mythological names and the early use of Jupiter s moons to establish position at sea and to estimate the speed of light Rothery discusses the structure formation and influence of our Moon and those of the other planets and ends with the recent discovery of moons orbiting asteroids whilst looking forward to the possibility of finding moons of exoplanets in planetary systems far beyond our own ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **Moons of the Solar System, Revised Second Edition** Thomas Wm. Hamilton,2019 Retired astronomer Thomas Wm Hamilton has written six books on astronomy But science always changes His most recent book Moons of the Solar System has just been revised to incorporate the newest research and information on these amazing bodies in the sky The new title is Moons of the Solar System Revised Second Edition Incorporating the Latest Discoveries in Our Solar System as well as Suspected Exomoons Having once worked on the Apollo Project the author has long been fascinated in studying moons From Galileo s discoveries in 1610 to the latest returns from the Cassini spacecraft in orbit around Saturn four centuries of discoveries in the solar system are summarized complete with the names of those responsible for finding them The 185 known moons of the planets and dwarf planets in the solar system are described in great detail from how they were discovered and by whom to information about their sizes and orbits The strange and exotic origins of the moons names make for astonishing stories Moons of the Solar System also includes the possible dangers faced

by human travel in space **Moons of the Solar System** James A. Hall III, 2015-09-19 This book captures the complex world of planetary moons which are more diverse than Earth's sole satellite might lead you to believe. New missions continue to find more of these planetary satellites making an up to date guide more necessary than ever. Why do Mercury and Venus have no moons at all? Earth's Moon of course is covered in the book with highly detailed maps. Then we move outward to the moons of Mars then on to many of the more notable asteroid moons and finally to a list of less notable ones. All the major moons of the gas giant planets are covered in great detail while the lesser known satellites of these worlds are also touched on. Readers will learn of the remarkable trans-Neptunian Objects: Pluto, Eris, Sedna, Quaoar including many of those that have been given scant attention in the literature. More than just objects to read about, the planets' satellites provide us with important information about the history of the solar system. Projects to help us learn more about the moons are included throughout the book. Most amateur astronomers can name some of the more prominent moons in the solar system but few are intimately familiar with the full variety that exists in our backyard. 146 and counting! As our understanding of the many bodies in our solar system broadens, this is an invaluable tour of our expanding knowledge of the moons both near and far.

Our Solar System! A Stellar Neighborhood Stacy McAnulty, 2025-09-02 From writer Stacy McAnulty and illustrator Stevie Lewis, *Our Solar System* is a light-hearted nonfiction picture book about the members of our solar system from the eyes of Comet who's been traveling through the Solar System for eons. Yee-haw! Strap in for one wild ride through our very own Solar System guided by space travelin' buckaroo Comet himself while you travel around meeting one impressive star, 8 unique planets, a handful of dwarf planets and a bonanza of moons, asteroids and comets. With characteristic humor and charm, Stacy McAnulty channels the voice of Comet in this next celestial autobiography in the *Our Universe* series. Rich with kid-friendly facts and beautifully brought to life by Stevie Lewis, this is an equally charming and irresistible companion to the other books in this series like *Earth: My First 4.54 Billion Years* and *Sun: One in a Billion*. *Moons of Our Solar System* Kerri O'Donnell, 2009-01-01 Although Earth has only one moon, other planets in our solar system have more. Readers learn about the fascinating features of these other moons. **Our Solar System** Lisa Reichley, 2020-10-20 Suit up for an expedition into the mysteries of our amazing solar system and beyond.
