James Joseph Sylvester

The Moon:

Structure of the Moon's Surface Gilbert Fielder, 2016-06-06 *Structure of the Moon's Surface* focuses on the importance of certain features of the Moon's surface that have frequently been disregarded in the past largely because of lack of knowledge of them. Topics covered include the librations of the Moon, height determinations of the points on the lunar surface, luminous intensity and luminescence of the lunar rocks, the color of moonlight and composition of the Moon's surface and the Moon's temperature and atmosphere. This book is comprised of 14 chapters and begins with a review of important physical problems associated with the Moon including its motion and figure as well as the luminous intensity and luminescence of its rocks. The following chapters discuss the polarization of light reflected by the Moon, the problem of the Moon's atmosphere, the probable nature of the Moon's surface and changes occurring on the Moon, The Moon's ray and grid systems, lattice patterns, rilles and faults, and distribution and frequency of craters are also considered. The final chapter is devoted to the origin of the Moon's surface. This monograph will be of use to both professional and amateur lunar astronomers. *The Nautical Almanac and Astronomical Ephemeris* Great Britain.
