The Biohistory of Feminism Carol Blakney, Abel Alves, 2026-02-02 The Biohistory of Feminism is a multilayered project that incorporates evolutionary biology to argue that behaviors labelled feminist by human cultures are already found in nature and that there is no one path to being female On a planet where asexual reproduction dominates intersex and parthenogenesis exist and eusocial females contribute to their colonies without reproducing being female goes beyond motherhood stereotypes dear to those who attempt to perpetuate a universal idea of male dominance in human history Feminism exists naturally as a series of efforts to express oneself in a multiplicity of ways freely chosen including the attainment of alpha status as a social animal managing resources and forming alliances Elephant matriarchs and alpha female bonobos were there among social animals before the appearance of human monarchs like Wu Zetian and contemporary politicians like Angela Merkel and cultural leaders like Wangari Maathai Female dolphins and chimpanzees taught cultural traditions before the intellectual achievements of literary figures like Sor Juana In s de la Cruz and scientists like Jane Goodall The diversity of female expression in nature is natural

The Regularity of

General Parabolic Systems with Degenerate Diffusion Verena Bögelein, Frank Duzaar, Giuseppe Mingione, 2013-01-28

The aim of the paper is twofold. On one hand the authors want to present a new technique called p-caloric approximation which is a proper generalization of the classical compactness methods first developed by DeGiorgi with his Harmonic Approximation Lemma. This last result initially introduced in the setting of Geometric Measure Theory to prove the regularity of minimal surfaces is nowadays a classical tool to prove linearization and regularity results for vectorial problems. Here the authors develop a very far reaching version of this general principle devised to linearize general degenerate parabolic systems. The use of this result in turn allows the authors to achieve the subsequent and main aim of the paper that is the implementation of a partial regularity theory for parabolic systems with degenerate diffusion of the type $\partial_t u + \operatorname{div} (A \nabla u) = 0$ without necessarily assuming a quasi-diagonal structure, i.e. a structure prescribing that the gradient nonlinearities depend only on the explicit scalar quantity.
