*Marine Pelagic Cyanobacteria: Trichodesmium and other Diazotrophs* E.J. Carpenter, D.G. Capone, 2013-03-09 Planktonic marine cyanobacteria are abundant and significant in the biogeochemistry of the sea This volume focuses on the filamentous cyanobacteria particularly those in the genus Trichodesmium which are common in tropical and subtropical seas A portion of this book also concerns bloom forming cyanobacteria in the Baltic Sea area Filamentous cyanobacteria are important as primary producers and for the fixation of atmospheric nitrogen and thus are significant in global cycling of both of these elements In recent years through the application of new techniques and intensive multi disciplinary research programs progress has been made in understanding both the biology of these cyanobacteria and their place in the marine food web A broad range of topics is covered in this book ranging from molecular biology physiology ultrastructure enzyme localization toxicology remote sensing buoyancy herbivory and the ecology of these organisms in the marine food web This volume is an outgrowth of a NATO sponsored meeting held

in May 1991 in Bamberg Germany and represents the latest synthesis on these marine phytoplankters Object-Oriented Behavioral Specifications Haim Kilov, William Harvey, 2007-08-20 Object Oriented Behavioral Specifications encourages builders of complex information systems to accelerate their move to using the approach of a scientific discipline in analysis rather than the approach of a craft. The focus is on understanding customers needs and on precise specification of understanding gained through analysis. Specifications must bridge any gaps in understanding about business rules among customers. Subject Matter Experts and computer people must inform decisions about reuse of software and systems and must enable review of semantics over time. Specifications need to describe semantics rather than syntax and to do that in an abstract and precise manner in order to create software systems that satisfy business rules. The papers in this book show various ways of designing elegant and clear specifications which are reusable lead to savings of intellectual effort time and money and which contribute to the reliability of software and systems. Object Oriented Behavioral Specifications offers a fresh treatment of the object oriented paradigm by examining the limitations of traditional OO methodologies and by describing the significance of competing trends in OO modeling. The book builds on four years of successful OOPSLA workshops 1991-1995 on behavior semantics. This book deals with precise specifications of what is accomplished by the business and what is to be done by a system. The book includes descriptions of successful use of abstract and precise specification in industry. It draws on the experience of experts from industrial and academic settings and benefits from international participation. Collective behavior neglected in some treatment of the OO paradigm is addressed explicitly in this book. The book does not take reuse of specifications or software for granted but furnishes a foundation for taking as rigorous an approach to reuse decisions as to precise specifications in original developments Gasdynamics of Explosions and Reactive Systems A. K. Oppenheim, 2013-10-22 Gas Dynamics of Explosions and Reactive Systems documents the proceedings of the 6th Colloquium held at the Royal Institute of Technology in Stockholm Sweden 22-26 August 1977. The meeting was held under the auspices of the Royal Swedish Academy of Sciences and the International Academy of Astronautics. The scientific program included over one hundred papers. The contributions in this volume are organized into four parts. Part I contains papers on gaseous detonations. It covers topics such as theoretical model of a detonation cell, spherical detonations in hydrocarbon air mixtures and shock wave propagation in tubes filled with water foams. Part II presents studies on explosions such as the detonation of hydrogen azide and propagation of a laser supported detonation wave. Part III examines condensed phase detonations. It includes papers on the mechanism of the divergent and convergent dark waves originating at the charge boundary in detonating liquid homogeneous explosives with unstable detonation front and initiation studies in sensitized nitromethane. Part IV presents discussions on turbulent detonations covering topics such as the computational aspects of turbulent combustion and problems and techniques in turbulent reactive systems The Impact of Microorganisms on Consumption of Atmospheric Trace Gases Steffen Kolb, Marcus A. Horn, J. Colin Murrell, Claudia

Knief, 2017-11-29 Gases with a mixing ratio of less than one percent in the lower atmosphere i e the troposphere are considered as trace gases Numerous of these trace gases originate from biological processes in marine and terrestrial ecosystems These gases are of relevance for the climate as they contribute to global warming or to the troposphere s chemical reactive system that builds the ozone layer or they impact on the stability of aerosols greenhouse and pollutant gases These reactive trace gases include methane a multitude of volatile organic compounds of biogenic origin bVOCs and inorganic gases such as nitrogen oxides or ozone The regulatory function of microorganisms for trace gas cycling has been intensively studied for the greenhouse gases nitrous oxide and methane but is less well understood for microorganisms that metabolize molecular hydrogen carbon monoxide or bVOCs The studies compiled this Research Topic reflect this very well While a number of articles focus on nitrous oxide and methane or carbon monoxide oxidation only a few articles address conversion processes of further bVOCs The Research Topic is complemented by three review articles about the consumption of methane and monoterpenes as well as the role of the phyllosphere as a particular habitat for trace gas consuming microorganisms and point out future research directions in the field The presented scientific work illustrates that the field of microbial regulation of trace gas fluxes is still in its infancy when one broadens the view on gases beyond methane and nitrous oxide However there is a societal need to better predict global dynamics of trace gases that impact on the functionality and warming of the troposphere Upcoming modelling approaches will need further information on process rates features and distribution of the driving microorganisms to fulfill this demanding task
