ABSTRACT

The low density metallic materials, aluminum, magnesium and titanium are important in a variety of segments of the economy ranging from aerospace to sports equipment. The importance of cost is strongly dependent on the industry being considered: in the construction and automobile industry, cost is extremely important, while in aerospace and medical applications, performance is emphasized rather than cost. This paper over-views the synthesis, processing, microstructure, mechanical properties and applications of these light-weight materials and gives some specific examples of their use in various industries.

INTRODUCTION

As performance demands increase, so do the demands for enhanced mechanical property combinations at reduced overall weight; and reduced weight can most efficiently be realized by the use of light (low density) metals such as aluminum, magnesium, and titanium (Figure 1) [1]. Improvements are being made via ingot metallurgy processing but more substantial developments require "far from equilibrium" synthesis with the attributes shown in Table I [2-5]. When cost is of primary importance (Figure 2) then this factor is emphasized over performance.

Table I. Attributes of "Far from Equilibrium" Synthesis.

1. Production of a Fine Dispersion of Second Phase Particles
2. Extension of Solubility Limits
3. Refinement of the Matrix Microstructure down to the Nanometer Range
4. Synthesis of Novel Crystalline Phases
5. Development of Amorphous (Glassy) Phases
6. Possibility of Alloying of Difficult to Alloy Elements
7. Inducement of Chemical Reactions at Low Temperatures
8. Scalable Process

Prof Sergey Firstov invited me to the Frantsevych Institute for Problems of Materials Science IPMS in Kyiv Ukraine to discuss possible collaborations in the area of advanced metals research During this visit a strong mutual interest was evident in a broad range of structural metals technologies and a quick friendship was established Countless subsequent emails and a reciprocal visit to the U S Air Force Research Laboratory by Prof Firstov and a team of scientists from IPMS ensued to discuss and detail a broad collaboration in the area of structural metals Two years after the initial visit a major investment by the U S Air Force Office of Scientific Research AFOSR was established to pursue the technologies defined by these

interactions The annual reviews of the AFOSR Ukrainian Metals Initiative were held in late May a most beautiful time in Kyiv when the lilacs are in bright display and the air is scented with the smell of falling blossoms from the chestnut trees that line the major streets and many parks The sunny days and mild evenings provide a welcome break from winter and on weekend evenings festive crowds spill onto the Khreshchatyk Kyiv's downtown boulevard to listen to street musicians watch jugglers and comedians or simply to celebrate with friends The annual reviews featured long days of intensive discussion of technical progress followed in the evenings by the warm hospitality of the Ukrainian hosts
