**Paradigmatic Shifts in Geographical Thought** Lalita

Rana, 2020-01-01 In advancing disciplines like Geography the methodological debate is a sign of health In Geography there has been extreme diversity of viewpoints on both philosophy and methodology with constant extension and also a shift in focus The methodology of geography came under debate for the first time during the middle of twentieth century when the paper published by F K Schaefer an American scholar brought both the qualitative and quantitative revolution in geographic development Shortly after this publication were discussed the paradigmatic shifts in a discipline by Thomas S Kuhn another American scholar through his seminal work in which he painted a picture of the development of science quite unlike that had gone before In order to elucidate this process of development of science Kuhn prepared a model termed as the Paradigm of Science Distinct parallels may be sought between the historical evolution of scientific discipline as explained by Thomas Kuhn and the historical evolution of the discipline of geography Seeking inspiration from the works of both of the great scholars mentioned above the present book examines the evolution of geographical thought from the perspective of Thomas Kuhn Two publications of mine 2008 2014 are on this line only However the methodological literature to understand the

philosophical background making possible this disciplinary growth is too small The purpose here is to explore and screen the growth and development of Geography under sequential methodological changes over time in the light of various paradigmatic shifts with the acknowledgement of crises and revolutionary phases of development in the discipline Accordingly the work identifies eight paradigmatic shifts intercepted by eight phases of crises in the discipline Nature of Geography as Perceived in Systems Theory Sharma, B L, 1994 Geography is not what we have assumed it we have conceived it and we have perceived it but it is that what we have not imagined it it is around us It is a system in itself Because human behaviour becomes rational when it acts individually but it becomes rational when it operates upon in a collective form Therefore it is very difficult to understand man and his behaviour in a given situation So it is incredible to argue about the discipline its past history and the methodological contents It is a misconceived notion of set boundary and a goal of its own in a multidimensional facets of the changing world complexes in which we are living Geography in its manifestations begins with the land scape evolution Physical basis interacts with the phenomena culminating in human relationships Cultural land scape of conceptual world of real and abstract interactions and processes conditions and relations of multivariate facets of elements Geographers are thus drawn to the illusion with perplex mind of geographical images This perception has drawn geography and geographers both into a state of unending dilemma of academic jargon of puzzles i e Whether it is founded on systems theory or simply an irrelevant distraction Science provides us very sharp tools But any craftsman will tell you it is the sharp tool which can do most damage or harm when misapplied It is apparently observed that geographers are badly operationalised with their blunted tools The present attempt is thus to discuss all those problems arising due to multidimensional approaches of the past present analysis and future methodologies more particularly in the system analogy of systems theory General Systems and the General Systems Theory as all these notions have different connotations How geography as a discipline is fitted well in the analogy of systems theory has been the main concern of these volumes Let us explore the possibilities What Geography is The first volume deals with the Systems Theory and Geography whereas the second interprets the Possible World of Geographer in Systems Theory Contents Vol I Part I General Systems Chapter 1 General Systems Theory Chapter 2 General Systems Theory Specific Features Chapter 3 General Systems Theory as a Metatheory Chapter 4 Outline History of the Systems Theory Chapter 5 The Systems Approach and its Development Chapter 6 Classification of Systems into Open and Closed Logic of Methodological Problems Chapter 7 Systems Theory and Modern Sciences Chapter 8 The Systems Approach in Social Sciences Chapter 9 Paradox of Systems Analysis Chapter 10 Prospects of the Systems Approach Part II Development of Nature of Geography Chapter 11 Progress in Geography Through Ages Chapter 12 German Contribution to Geography Chapter 13 Geographers of the Second and Third Generation Chapter 14 Leaders of the Fourth Generation Chapter 15 French Geographers Contribution to Geography Chapter 16 The Second Generation of French Geographers Chapter 17 Geography in Indian Context Chapter 18 Theories Laws and Models A
