Sustainable Development In Practice:

Sustainable Development in Practice Adisa Azapagic, Slobodan Perdan, 2011-06-28 *Sustainable Development in Practice Case Studies for Engineers and Scientists Second Edition* explores the concept of sustainable development and its implications for science and engineering. It looks at how sustainability criteria can be combined with traditional scientific and engineering considerations to design and operate industrial systems in a more sustainable manner. Taking a life cycle approach to addressing economic, environmental and social issues, the book presents a series of new practical case studies drawn from a range of sectors including mining, energy, food, buildings, transport, waste and health. Written in an accessible style, the book opens with a general introduction to the concept of sustainable development and explores its practical implications for technical experts. Recognising that practical application of sustainable development depends on the context, the second part of the book is devoted to case studies. The case studies explore scientific and technical aspects alongside relevant environmental, economic and social issues. The key features of this completely revised and updated second edition include: Twelve new chapters including the case studies on nuclear energy, biofuels, aviation, buildings, urban transport, food, sanitation and health. Six completely revised chapters. Coverage of a wide range of sustainability issues in both developed and developing countries. Integration of scientific and technical aspects with economic, environmental and social considerations. Discussion of policy implications. Communication with the non-engaging and non-scientific audience. Considered essential reading for all engineers and scientists concerned with sustainable development. *Sustainable Development in Practice Case Studies for Engineers and Scientists Second Edition* also provides key reading and learning materials for undergraduate and postgraduate science and engineering students.

Managing Organizations for Sustainable Development in Emerging Countries Angappa Gunasekaran, Charbel José Chiappetta Jabbour, Ana Beatriz Lopes de Sousa

Jabbour, 2017-10-02 *Managing Organizations for Sustainable Development in Emerging Countries* focuses on the main challenges and opportunities of managing firms and emerging economies in the light of sustainable development. One of the key questions of sustainable development is how organizations from developing countries are achieving their economic goals while considering simultaneously environmental issues like conservation of natural resources, eco-efficiency, biodiversity conservation and climate change mitigation. These questions are relevant for government, industry and urban sustainability. However, in the modern literature that discusses organizational management for sustainable development, few studies focus on the reality of organizations from emerging countries. Moreover, changing environmental legislation in emerging countries such as China and Brazil will affect organizational managers. In this context, this book may contribute to organizational management in the search for more sustainable organizations as well as deal with the challenges of managing organizations in the context of increased social problems, degradation of natural resources, loss of biodiversity and climate change. This book was published as a special issue of the *International Journal of Sustainable Development World Ecology*. *Sustainable*

Sustainability and Wellbeing Mònica Guillen-Royo, 2018-03-29 The idea that we can meet human needs and simultaneously conserve and even enhance the natural environment is an attractive one Since the Brundtland report popularised a definition of sustainable development based on the concept of needs there has been a widespread belief that it should be possible to achieve a good quality of life without compromising natural ecosystems Sustainability and Wellbeing fills a gap in sustainable development studies by drawing on a range of case studies to discuss the challenges and opportunities of using Max Neef's Human Scale Development HSD framework in practice The first section presents the theory and the methodology of HSD in the context of related literature on sustainable development and wellbeing The second section discusses applications of the HSD methodology with three different purposes the design of sustainable development interventions the engagement of researchers with communities or groups of people in sustainability processes and the consolidation of sustainable community initiatives Finally the third reflects on challenges and limitations of using the HSD approach to define strategies for sustainable development and concludes This is an invaluable resource for researchers and postgraduate students in wellbeing sustainability sustainable development and human development Economics of Land Degradation and Improvement - A Global Assessment for Sustainable Development Ephraim Nkonya, Alisher

Mirzabaev, Joachim von Braun, 2015-11-11 This volume deals with land degradation which is occurring in almost all terrestrial biomes and agro ecologies in both low and high income countries and is stretching to about 30% of the total global land area About three billion people reside in these degraded lands However the impact of land degradation is especially severe on livelihoods of the poor who heavily depend on natural resources The annual global cost of land degradation due to land use and cover change LUCC and lower cropland and rangeland productivity is estimated to be about 300 billion USD Sub Saharan Africa SSA accounts for the largest share 22% of the total global cost of land degradation Only about 38% of the cost of land degradation due to LUCC which accounts for 78% of the US 300 billion loss is borne by land users and the remaining share 62% is borne by consumers of ecosystem services off the farm The results in this volume indicate that reversing land degradation trends makes both economic sense and has multiple social and environmental benefits On average one US dollar investment into restoration of degraded land returns five US dollars The findings of the country case studies call for increased investments into the rehabilitation and restoration of degraded lands including through such institutional and policy measures as strengthening community participation for sustainable land management enhancing government effectiveness and rule of law improving access to markets and rural services and securing land tenure The assessment in this volume has been conducted at a time when there is an elevated interest in private land investments and when global efforts to achieve sustainable development objectives have intensified In this regard the results of this volume can contribute significantly to the ongoing policy debate and efforts to design strategies for achieving sustainable development goals and

related efforts to address land degradation and halt biodiversity loss
