Sustainable Technology Development:

Sustainable Technology Development Paul Weaver,Leo Jansen,Philip Vergragt,Geert van Grootveld,Egbert van Spiegel,2000-04-01 In the time it takes to read this sentence about fifteen people will be added to the world's population Read the sentence again and there will be thirty Tomorrow each of these people will be demanding greater prosperity Production and consumption are increasing fast but will have to grow even faster in the future to keep up with population growth and a world increasingly divided by inequality How should we react to these trends Certainly many use growth figures to forecast disaster But there is an alternative vision one of a sustainable future in which growth is seen not as a threat but as the driving force behind innovation This is the scenario worked out in the Netherlands by Sustainable Technology Development STD a five year programme of research and learning by doing based on setting up new innovation networks and working with new methods to search for sustainable technological solutions In order to make sustainability tangible STD made a leap in time What human needs will have to be satisfied fifty years from now Taking a sustainable future vision as a starting point STD demonstrated what steps we should take today for new technologies and systems to be in place in time These results are now available for the first time in a comprehensive specifically written English language book together with a description of the unique working method of STD and the results and key lessons from a set of the programme's illustrative case studies This book serves as a manual for industry governments and social leaders wanting to prepare themselves for a sustainable future Sustainable Technology Development sets out the programme's underpinning philosophy and describes its approach methods and findings Delivering sustainability means finding ways to meet human needs using a fraction of the natural resources we use today The world's richer nations would be wise to target at least ten fold improvements by 2050 in the productivity with which conventional natural resources and environmental services are used And they need to bring new sustainable resources on stream to augment the resource base and replace the use of unsustainable alternatives Sustainable Technology Development marks a significant contribution to our understanding of innovation processes and how these might be influenced in favour of sustainable technology development In principle technology could play a pivotal role in sustainable development Whether it does or not depends on whether innovators can be encouraged to make this an explicit goal adopt long term time horizons and search for renewable technologies Given the long lead times involved there is no time to waste in beginning the search The STD programme has begun to make inroads into one of the most urgent of all needs concerning sustainable development that for innovation in the innovation process itself

Sustainable Technology Development Paul Weaver,Leo Jansen,Geert van Grootveld,Philip Vergragt,Egbert van Spiegel,2000 Sustainable Technology Development describes the Dutch national research programme of the same name which has sought ways to influence innovation processes and outcomes in favour of accelerating the development of sustainable technologies and maximising the contribution that technology can make toward sustainable development

What is Sustainable Technology? Karel Mulder, Didac Ferrer, Harro van Lente, 2017-09-08 Designers of technology have a major responsibility in the current age. Their designs can have tremendous effects on society in both the short and the long term. In fact, sustainable development itself has all the characteristics of a design project, albeit a vast one. But a failed product design here will be not just be unsuccessful in the market, it will have far-reaching consequences. It is our common responsibility to make the project successful. Technology has played an important role in creating the problems that we now face, but it will also play an important role in solving them. But this does not mean the technological fix will be easy. How do we allocate resources and attention when there are myriad issues under the umbrella of sustainable development, currently in competition with one another? How do we arrive at precise specifications for the sustainable technologies that are to be developed and furthermore reach consensus on these specifications? What if our sustainable technological solutions aggravate other problems or create new ones? And because sustainable development is all about the long term consequences of our actions, how do we assess the effects of modifying existing landscapes, infrastructures and patterns of life? How could we be sure in advance that the changes that new technologies bring will make our society more sustainable? These dilemmas and paradoxes are the subject of this provocative book. Sometimes the claim that a technology is sustainable is made in order to make the technology acceptable in the political process, as in the case of nuclear energy production, where the claims of sustainability refer to the absence of CO₂ emissions. In the case of biofuels, claims of sustainability have led to a fuel or food debate, showing that sustainability has counteracting articulations. And the well-known rebound effect is observed when increased resource efficiency can create a stimulus for consumption. What is Sustainable Technology illustrates that the sustainability impact of a technology is often much more complicated and ambivalent than one might expect. Making improvements to existing designs is not the technological challenge that will lead to real solutions. We mustn't look to change a part of a machine but rather the machine as a whole or even the whole system in which it functions. It is these system innovations that have the potential to make a genuine contribution to sustainable development. What is Sustainable Technology will help all those involved in designing more sustainable technologies in determining their strategies. It does so by presenting case studies of different technologies in contrasting contexts. Each case asks 1. What articulations of sustainability played a role in the design process? 2. What sustainability effects did this technology lead to? 3. Who was affected where and when? 4. Could the designer have foreseen these consequences? 5. How did the designer anticipate them? 6. How was societal interaction dealt with during the design process? Finally, the authors reflect on future options for the sustainable technology designer. They argue that an important first step is an awareness of the multitude of sustainable development challenges that play a role in production, use, recycling and end-of-life disposal. What is Sustainable Technology will be essential reading for product designers, engineers, material scientists and others involved in the development of sustainable technologies, as well as a wide academic audience interested in the complexities of the sustainable design process.

Technology for a Sustainable Future United States. Office of Science and Technology. Environmental Technology Strategy Staff, 1994

Strategies for Sustainable Technologies and Innovations John R. McIntyre, Silvester Ivanaj, Vera Ivanaj, 2013

There is no debate about the fact that a business as usual approach is an environmentally unsustainable one. Given the magnitude of the environmental challenges the world faces today, extensive changes in corporate strategies and significant innovation advances are absolutely necessary if we are to avoid substantial decreases in our quality of living. This set of internationally recognized authors provides some fresh and informative perspectives on this topic along with a path for a more sustainable future. Mark Ferguson, University of South Carolina, US. Corporations across the world are becoming increasingly aware of the threat of environmental degradation and the growing importance of sustainable business practices. This raises a vital question: How can for-profit firms and other profit-conscious enterprises such as government organizations implement more environmentally friendly policies without sacrificing profitability? This innovative volume tackles that complex question, offering detailed recommendations for making strategic technological choices that are economically advantageous, ecologically sustainable, and socially responsible. Expert contributions examine the contextual factors that affect implementation of more sustainable technology and innovation practices, offering a number of empirical methodologies to describe and explain these multidimensional influences. What emerges is a compelling argument in favor of balanced strategies that merge profitability concerns with ecological consciousness, allowing for controlled sustainable development and stable long-term economic success. Discussion of companies in both developed and emerging countries makes this book useful on a truly global scale. Students and professors of business management studies and economics will find much to admire in this path-breaking volume. Managers, policymakers, and other practitioners will also benefit greatly from this book's timely and insightful recommendations.

Technologies and Innovations for Development Jean-Claude Bolay, Alexandre Schmid, Gabriela Tejada, Eileen Hazboun, 2012-02-23 Technological innovation combined with scientific research has always constituted a driving force of transformation in our societies. At the same time it is no longer simply possible to transfer technologies from the North to the South; it is also essential to consider technical innovations that are adapted to the social, environmental, cultural and economic conditions of receiving countries and which can be appropriated by their potential users and as such prove to be real technologies for fostering development. The first International Scientific Conference on the topic organized by the UNESCO Chair Technologies for Development at the Ecole Polytechnique Fédérale de Lausanne in 2010 focused on its four priority sectors: Technologies for Sustainable Development of Habitat and Cities, ICTs for the Environment, Science and Technology for Disaster Risk Reduction and Technologies for the Production of Sustainable Energy. This volume reflects the main outcomes of the conference and provides some significant orientation and success criteria for the effective implementation and use of innovative technologies, their aims, their particular applications in the context of developing countries, their accessibility for users and their appropriation by producers and stakeholders in the field of development, both in the North and South, thus ensuring their sustainability. This kind of scientific cooperation also highlights the added values for northern researchers in sharing their knowledge and know-how, leading to a real win-win partnership. The authors gathered within this book include representatives from academic and research institutions and other organizations from diverse countries and offer a significant synergy of competences, approaches and disciplines.
