A mixed-method study** Lena Rothe, 2023-11-08 Master s Thesis from the year 2022 in the subject Pedagogy Higher Education grade 1 G teborg University Department of Pedagogical Curricular and Professional Studies course Education for Sustainable Development language English abstract This study focuses on achieving an in depth understanding of teacher educators and teacher students perspectives on garden based learning in the teacher education program in several universities in Germany The theoretical framework is based on three theories Garden based learning as proposed by Gaylie 2009 focuses on the role of the garden in teacher education as environment community and transformation As suggested by Meek and Tarlau 2016 critical food system education approaches food system change by helping students realise their potential in structurally transforming the food system through collective action Actor network theory analyses the human nature relationship by not privileging one over the other A mixed method approach was applied incorporating semi structured interviews with eight teacher educators and an online survey with six teacher educators and 81 teacher students from five German universities This methodological approach enabled an in depth and holistic understanding of their perspectives of the learning garden and food system education to emerge The collected data were thematically analysed and

codes were generated inductively and deductively The results indicate that receiving support from various stakeholders is essential for teacher educators and that the motivation of the teacher educators is indispensable for initiating a learning garden in the teacher education programme The teacher educators that started learning gardens mostly have previous experiences related to garden based learning The teacher students and teacher educators perceived the learning garden as a place for experiential learning where the traditional student teacher relationship can be challenged According to teacher students learning outcomes such as social competency conscientiousness self efficacy and action competency could be developed in the learning garden It was found that teacher educators did not consider food system education in learning gardens to a great extent Moreover teacher students and teacher educators both perceive the learning garden as contributing to a more sustainable food system through a more sustainable diet and consumption pattern *People & the Planet* ,1994 Developing a Plan for the Planet Ian Chambers,John Humble,2011 The world struggles with increasing threats to global sustainability caused by population growth overuse of fresh water resources depletion of biodiversity and reliance on non renewable energy sources This title outlines a co ordinated approach to tackling the global challenges we face which can be implemented at every level **Our Planet** ,2004 **Counterculture Green** Andrew G.
