## **Social Costs And Sustainable Mobility:**

**Social Costs and Sustainable Mobility** Klaus Rennings, Olav Hohmeyer, Richard L. Ottinger, 2012-12-06 Fair and efficient pricing has become increasingly important in international environmental and transport policy. Thus the valuation and internalization of social costs is now a crucial element within strategies towards sustainable mobility. The book provides methods and results from major European and American studies evaluating both social costs of transport and first experiences with their internalization in different contexts: infrastructure planning, urban road pricing and highway tolling. Additionally, complementary non-monetary instruments for a transition towards sustainable mobility are presented and discussed.

Vehicle-to-grid power fundamentals. The aspects of measuring costs, potential benefits and socio-technical barriers for sustainable improvement of the transport sector in Nordic countries Jobaire Alam, 2018-02-27 Scientific Study from the year 2016 in the subject Energy Sciences grade A Aalborg University language English abstract Electric power vehicles are exceptionally complementary as systems for managing energy and power. Nordic countries have been considered as one of the frontrunners for electrification in their transport sector. So this study is to investigate the current concerns of costs, potential benefits and socio-technical challenges of vehicle-to-grid transition for sustainable improvement in Scandinavian transport sector. Literature review section presents a clear understanding of previous researches around this topic. However, very few researches have been conducted in Scandinavia around this issue. This study intends to adopt qualitative method with a multi-criteria analysis. According to the expected result of this study, Electric Vehicles and V2G contribute to the national energy systems which allow integration of much higher levels of wind electricity and also greatly reduce national CO<sub>2</sub> emissions. Various previous studies show that transition to vehicle-to-grid technology has much to offer to society. Researchers further added that reducing petroleum use would help insulate oil-importing economies from petroleum price spikes and shocks to the global market. It would also greatly improve the quality of the environment by displacing noxious emissions and the health, ecological and climate change damages. Five Nordic countries are considered as pioneers in the world for renewable energy system. Various studies about Scandinavian transportation and energy system presented that V2G technology offers the motorists potential cost savings from their use of electricity as a fuel instead of gasoline. It is further explained that technological alternatives and energy plans play a significant role in Scandinavia. It is widely accepted that Nordic countries have become frontrunner for electrification in their transport sectors with the growth in travel demand including climate change and oil demand at a global scale. Therefore, it is a major concern to assess the cost, potential benefits of socio-technical perspective of V2G technology in these countries.

insights into the social costs and benefits of leisure business and health travel and taking into account the social costs or benefits of measures whose goals are primarily environmental The authors provide the necessary background to judge whether proposed transport policies are also sustainable from a social perspective Part IV highlights future alternatives to physical travel and surveys ecologically sustainable travel modes such as public transport and non motorized modes of transportation **Social Costs and Sustainability** Olav Hohmeyer, Richard L Ottinger, Klaus Rennings, 1996-10-21

Important progress has been made in recent years in the valuation of social costs of energy and transport This progress has encouraged the insight that systems of Green Accounting considering social costs and policy instruments for the internalization of social costs are necessary tools to realize the worldwide goal of sustainable development This workshop report provides an excellent survey of the latest results of social costs in the energy and transport sector Further the theoretical framework of social costs is extended to a broader concept of sustainable development Finally concepts and first experiences of the internalization of social costs e g through least cost planning or an ecological tax reform are reviewed
