Social Perception

Social Perception:

   Social Perception Leslie A. Zebrowitz,1990 This book argues that the mainstream approach to social perception is a cognitive one which focuses primarily on the processes of perceiving people It aims to redress the imbalance by giving greater emphasis to the content of social perceptions the stimulus information on which they are based and the functions which they serve   **New Research on Social Perception** John A. Zebrowski,2007 The contemporary concept of social perception is considered to be an umbrella term that includes various other traditional and related phenomena such as person perception impression and attitude formation social cognition attribution stereotypes prejudice social categorisation and social comparison and implicit personality theories This book presents research on social perspectives and behavioural responses which follow These include child perceptions social class issues perceived attractiveness theories occupational prestige and related communication factors   **Social Perception** Jenifer B. Teiford,2008 The contemporary concept of social perception is considered to be an umbrella term that includes various other traditional and related phenomena such as person perception impression and attitude formation social cognition attribution stereotypes prejudice social categorisation and social comparison and implicit personality theories This new book presents research on issues related to social perception and behavioural responses which follow These include child perceptions social class issues perceived attractiveness theories occupational prestige and related communication factors   Social Perception and Social Reality Lee Jussim,2012-04-06 Social Perception and Social Reality contests the received wisdom in the field of social psychology that suggests that social perception and judgment are generally flawed biased and powerfully self fulfilling Jussim reviews a wealth of real world survey and experimental data collected over the last century to show that in fact social psychological research consistently demonstrates that biases and self fulfilling prophecies are generally weak fragile and fleeting Furthermore research in the social sciences has shown stereotypes to be accurate Jussim overturns the received wisdom concerning social perception in several ways He critically reviews studies that are highly cited darlings of the bias conclusion and shows how these studies demonstrate far more accuracy than bias or are not replicable in subsequent research Studies of equal or higher quality which have been replicated consistently are shown to demonstrate high accuracy low bias or both The book is peppered with discussions suggesting that theoretical and political blinders have led to an odd state of affairs in which the flawed or misinterpreted bias studies receive a great deal of attention while stronger and more replicable accuracy studies receive relatively little attention In addition the author presents both personal and real world examples such as stock market prices sporting events and political elections that routinely undermine heavy handed emphases on error and bias but are generally indicative of high levels of rationality and accuracy He fully embraces scientific data even when that data yields unpopular conclusions or contests prevailing conventions or the received wisdom in psychology in other social sciences and in broader society   Variability and Individual Differences in Early Social Perception and Social Cognition Jessica

Sommerville,Alia Martin,Talee Ziv,2016-06-10 Over the past three decades mounting evidence has suggested that infants social perceptual and social cognitive abilities are considerably richer than was once thought By the end of the second year of life infants discriminate faces along various social dimensions attend to and understand others goals and intentions use the emotions of others to guide their learning and behavior attribute dispositional characteristics to other agents and make basic social evaluations What has also become clear is that there is a great deal of variability in infants social perception and cognition A critical outstanding question concerns the nature and meaning of such variability The proposed Research Topic welcomes papers addressing cutting edge questions regarding variability and individual differences in early social perception and social cognition The goal of these papers is to investigate overarching questions in this domain which are necessary to move the field forward Variability in early social perception and social cognition among other domains in infancy and early childhood is often attributed to noise or overlooked in favor of focusing on age related changes Yet recent work suggests that variability in social perceptual and social cognitive tasks reliably inter relates and predicts real world social behaviors For example infants everyday experience with different face categories predicts individual differences in face processing infants production of goal directed actions predicts their simultaneous understanding of these actions and variability in social attention during the second year of life is related to theory of mind during the preschool years These findings suggest that variability in performance on social perception and social cognition tasks is not merely a nuisance variable but rather may provide the key to addressing significant questions regarding the nature of infants social perception and social cognition and the processes that underlie developmental change Acknowledging and closely examining and investigating variability in early social perceptual and social cognitive abilities may represent a powerful approach for understanding development in at least two ways First variability can signal transitional points in the developmental onset of a given ability Thus such variability and the extent to which variability relates to experience and or other abilities can be used to test hypotheses regarding mechanisms that underlie developmental changes Second variability can represent more enduring individual differences between infants In this case critical questions arise regarding the source of individual differences that is what factors shape the emergence of individual differences and whether such early individual differences contribute to the development of more advanced and sophisticated forms of social cognition and behavior The goal of this Research Topic will be to encourage researchers to take variability in early social perception and cognition seriously Papers that give variability center stage and are aimed at addressing the value of variability for identifying developmental mechanisms as well as investigating the existence source and antecedents of early individual differences in social perception and social cognition are welcomed Taken together the contributed papers will provide integral new information to the study of social perception and social cognition over the first three years of life   Social Perception from Individuals to Groups Steven J. Stroessner,Jeffrey W. Sherman,2015-02-11 This volume focuses on social perception the processing of information about people This issue has

always been central to social psychology but this book brings together literatures that in large part have been separated by the nature of the social target that is involved Historically research on person perception developed quite independently from research involving perceptions of groups Whereas the former research generally focused on the cognitive processes involved in forming impressions of individuals research on group perception examined the content of stereotypes and the conditions under which they are used in social judgment There was been little overlap in the theories and methods of these subfields and different researchers were central in each The chapters in this book highlight research and theorizing about social perception exploring the processes involved in social perception from persons to groups Some chapters describe work that was originally developed in person perception but is being extended to understanding groups Other chapters illustrate how some processes studied in the domain of stereotyping also affect perceptions of individual persons Finally other chapters focus on variables that affect perceptions and judgments of both individuals and groups proving opportunities for greater recognition of the common set of factors that are central to all types of social perception This groundbreaking book highlights the research contributions of David L Hamilton whose research has played a central role in uniting these previously independent areas of research It provides essential reading for upper level courses on social cognition or social perception and could also serve as an auxiliary text in courses on interpersonal perception relations and courses on stereotyping intergroup relations *Social and Affective Neuroscience* GE Federation of Psychologists, Social and Affective Neuroscience Defining Affective Neuroscience The Brain s Emotional Processing Pathways The Role of the Amygdala The Neurobiology of Fear The Neurobiology of Anxiety The Neurobiology of Depression The Neurobiology of Happiness The Neurobiology of Love The Neurobiology of Empathy The Social Brain Hypothesis The Mirror Neuron System Imitation and Social Learning Emotional Contagion Nonverbal Communication The Neuroscience of Attachment The Neuroscience of Rejection The Neuroscience of Trust The Neuroscience of Cooperation The Neuroscience of Competition The Neuroscience of Morality The Neuroscience of Prosocial Behavior The Neuroscience of Prejudice The Neuroscience of Stereotyping The Neuroscience of Empathy Disorders The Neuroscience of Autism Spectrum Disorder The Neuroscience of Psychopathy The Neuroscience of Emotional Regulation The Neuroscience of Mindfulness The Neuroscience of Cognitive Behavioral Therapy The Neuroscience of Social Cognition The Neuroscience of Decision Making The Neuroscience of Risk Taking The Neuroscience of Persuasion The Neuroscience of Advertising The Neuroscience of Music and Emotion The Neuroscience of Art and Emotion The Neuroscience of Film and Emotion The Neuroscience of Video Games and Emotion The Neuroscience of Social Media and Emotion The Neuroscience of Loneliness The Neuroscience of Belonging The Neuroscience of Leadership The Neuroscience of Teamwork The Neuroscience of Cultural Differences The Future of Affective Neuroscience Conclusion Implications and Applications *Social Perception* Ilona Roth,1976 *Organizational Behaviour in a Global Context* Albert J. Hinton,2015-09-16 What are other people like How do we decide if someone is friendly honest or clever What assumptions do we develop about them and what explanations do we give for their behaviour The Perception of People examines key topics in psychology to explore how we make sense of other people and ourselves Do our decisions result from careful consideration and a desire to produce an accurate perception Or do we jump to conclusions in our judgements and rely on expectations and stereotypes To answer these questions the book examines models of person perception and provides an up to date and detailed account of the

central psychological research in this area focusing in particular on the social cognitive approach It also considers and reflects on the involvement of culture in cognition and includes coverage of relevant research in culture and language that influence the way we think and speak about others As well as providing a valuable text in social psychology The Perception of People also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology anthropology sociology philosophy and social history Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it Ideal reading for students of social psychology this engaging text will also be useful in subject areas such as communication studies and media studies where the perception of people is highly relevant
