## Social Mind:

**Dual-Process Theories of the Social Mind** Jeffrey W. Sherman, Bertram Gawronski, Yaacov Trope, 2014-05-09 This volume provides an authoritative synthesis of a dynamic influential area of psychological research. Leading investigators address all aspects of dual process theories: their core assumptions, conceptual foundations, and applications to a wide range of social phenomena. In 38 chapters, the volume addresses the pivotal role of automatic and controlled processes in attitudes and evaluation, social perception, thinking and reasoning, self-regulation, and the interplay of affect, cognition, and motivation. Current empirical and methodological developments are described. Critiques of the duality approach are explored, and important questions for future research identified.

**Signs, Mind, and Reality** Sebastian Shaumyan, 2006-01-01 The book presents a new science of semiotic linguistics. The goal of semiotic linguistics is to discover what characterizes language as an intermediary between the mind and reality so that language creates the picture of reality we perceive. The cornerstone of semiotic linguistics is the discovery and resolution of language antinomies: contradictions between two apparently reasonable principles or laws. Language antinomies constitute the essence of language and hence must be studied from both linguistic and philosophical points of view. The basic language antinomy, which underlies all other antinomies, is the antinomy between meaning and information. Both generative and classical linguistic theories are unaware of the need to distinguish between meaning and information. By confounding these notions, they are unable to discover language antinomies and confine their research to a naturalistic description of superficial language phenomena rather than the quest for the essence of language.

Series A **The SAGE Handbook of the Philosophy of Social Sciences** Ian C. Jarvie, Jesus Zamora-Bonilla, 2011-02-17 What is the relationship between the social sciences and the natural sciences? Where do today's dominant approaches to doing social science come from? What are the main fissures and debates in contemporary social scientific thought? How are we to make sense of seemingly contrasting approaches to how social scientists find out about the world and justify their claims to have knowledge of it? In this exciting handbook, Ian Jarvie and Jesus Zamora Bonilla have put together a wide-ranging and authoritative overview of the main philosophical currents and traditions at work in the social sciences today. Starting with the history of social scientific thought, this handbook sets out to explore that core fundamentals of social science practice from issues of ontology and epistemology to issues of practical method. Along the way, it investigates such notions as paradigm, empiricism, postmodernism, naturalism, language, agency, power, culture, and causality. Bringing together in one volume leading authorities in the field from around the world, this book will be a must-have for any serious scholar or student of the social sciences.

Origin of Group Identity Luis P. Villarreal,2008-12-10 A sense of belonging is basic to the human experience But in this humans are not unique Essentially all life from bacteria to humans have ways by which it determines which members belong and which do not This is a basic cooperative nature of life I call group membership which is examined in this book However cooperation of living things is not easily accounted for by current theory of evolutionary biology and yet even viruses display group membership That viruses have this feature would likely seem coincidental or irrelevant to most scientist as having any possible relationship to human group identity Surely such simple molecular based relationships between viruses are unrelated to the complex cognitive and emotional nature of human group membership Yet viruses clearly affect bacterial group membership which are the most diverse and abundant cellular life form on Earth and from which all life has evolved Viruses are the most ancient numerous and adaptable biological entities we know And we have long recognized them for the harm and disease they can cause and they have been responsible for the greatest numbers of human deaths However with the sequencing of entire genomes and more recently with the shotgun sequencings of habitats we have come to realize viruses are the black hole of biology a giant force that has until recently been largely unseen and historically ignored by evolutionary biology Viruses not only can cause acute disease but also persist as stable unseen agents in their host
