AIR CRASH INVESTIGATIONS EYE OF THE NEEDLE The Crash of British Airways Flight 38 Hans Griffioen, editor, 2012-11-01 On 28 November 2008 a Boeing 777 200ER operated by British Airways as flight BA38 on its way from Beijing China to London Heathrow suffered on approach to Heathrow Airport an in flight engine rollback At 720 feet agl the right engine ceased responding to autothrottle commands for increased power and

instead the power reduced to 1.03 Engine Pressure Ratio (EPR). Seven seconds later the left engine power reduced to 1.02 EPR. This reduction led to a loss of airspeed and the aircraft touching down some 330 m short of the paved surface of Runway 27L at London Heathrow. The investigation identified that the reduction in thrust was due to restricted fuel flow to both engines. It was determined that the restriction occurred most probably in the Fuel Oil Heat Exchangers. The investigation identified the forming of ice in the fuel system as probable cause. The aircraft was destroyed but there were no casualties.

Operational Safety for Aviation Managers John Frearson, 2024-11-28. Despite the vast amount of work building the foundations of safe operations, aviation accidents still happen and prior to many accidents and other safety related events there was unexpressed or ignored disquiet as the last minute approached, the last minute being that time when there is no longer time for discussion or analysis, only safety first action. This book aims at the assurance of better outcomes from these time critical situations whose genesis lies in the time period immediately preceding the last minute. This assurance of better outcomes can best be assured by enabling operational managers to adopt new paradigms in the development of SOPs, building the right culture and implementation of training programs relevant to good decision making required as the last minute approaches. This book examines the development of the foundations for aviation safety, the things that give foundational support for safety to pilots in particular but over which line pilots may have little knowledge or day to day control. It provides a history of time critical safety related events providing the foundation for the understanding of the reasons why pilot inactivity, indifference, fixation and incapacitation can so pervade the lead up to the last minute as to leave the safe continuation of the flight resting on prompt remedial action. The role of doubt, how it is expressed and how it is heard is another central thread. Finally, the book addresses the role of flight data analysis as a valuable management tool. Written for aviation managers, line flight crews and those in similar operational roles in aviation related operations, this book and its informal discussion style should appeal and communicate across national age experience and language boundaries to create a safer operational environment.
