## What is audio gating?

Audio gating is the control of when and to what degree audio passes through a channel. It's based on factors including the signal level strength. In some cases, it's referred to as a noise gate.

Imagine standing in front of a fence gate and whispering, "I want to come in." Nothing happens. Then you yell, "I WANT TO COME IN" and this time the gate opens. The higher volume level is what opened the gate.

Gating is more than controlling if a signal passes through the channel. Other properties can be controlled:

- The speed of the opening and closing.
