The Optical Transfer Function:

Introduction to the Optical Transfer Function Charles Sumner Williams, Orville A. Becklund, 2002 This work covers spatial frequency spread function wave aberration and transfer function and how these concepts are related in an optical system how they are measured and calculated and how they may be useful The Optical Transfer Function of Imaging Systems Thomas Williams, 1998-12-23 The Optical Transfer Function of Imaging Systems deals extensively with the theoretical concept of the optical transfer function OTF its measurement and application to imaging devices The OTF is a mathematical entity describing how well the subject is transferred into an image via the lens The book focuses on the practical aspects of using and measuring the OTF It presents the background physics necessary to understand and assess the performance of the great proliferation of electro optical systems including image intensifiers video cameras and thermal imagers Assuming a senior undergraduate level of optics knowledge the book is suitable for graduate courses in optics electro optics and photographic science In addition it is a practical guide for systems designers who require a means of assessing and specifying the performance of imaging systems It is also of interest to physicists and engineers working in all areas of imaging *The Optical Transfer Function* K. R. Barnes, 1971 Modulation Transfer Function in Optical and Electro-optical Systems Glenn D. Boreman, 2001 This tutorial introduces the theory and applications of MTF used to specify the image quality achieved by an imaging system It covers basic linear systems theory and the relationship between impulse response resolution MTF OTF PTF and CTF Practical measurement and testing issues are discussed **The Optical Transfer Function of Imaging Systems** Thomas Williams, 2017 The Optical Transfer Function of Imaging Systems deals extensively with the theoretical concept of the optical transfer function OTF its measurement and application to imaging devices The OTF is a mathematical entity describing how well the subject is transferred into an image via the lens The book focuses on the practical aspects of using and measuring the OTF It presents the background physics necessary to understand and assess the performance of the great proliferation of electro optical systems including image intensifiers video cameras and thermal imagers Assuming a senior undergraduate level of optics knowledge the book is suitable for graduate courses in optics electro optics and photographic science In addition it is a practical guide for systems designers who require a means of assessing and specifying the performance of imaging systems It is also of interest to physicists and engineers working in all areas of imaging Provided by publisher Recommendations for Measurement of the Optical Transfer Function of Optical Devices British Standards Institute Staff, British Standards Institution, 1971-11-10 Optical instruments Optical measurement Optical phenomena Transfer functions Performance testing Test equipment Accuracy Testing conditions Error correction Selected Papers on Optical Transfer Function Lionel R. The optical transfer function OTF of a lens is used widely as an indicator for the quality in reproduction of images for both individual optical lenses and larger optical and electro optical systems The report is the synthesis of the outcome of an international intercomparison of the measurement of the optical transfer function Of the four laboratories taking part in the exercise two employed image scanning instruments in their measurements whereas the other two used interferometers It is concluded that the intercomparison has demonstrated the capability of the participating laboratories to make equivalent measurement within their uncertainties of measurement The exercise has identified some sources of error for two of the laboratories On this background some modifications of equipment and software have been undertaken It has been confirmed that the scanning and interferometric techniques can produce equivalent results with equal accuracy Editor Optics and Photonics. Since the incorporation of scientific approach in tackling problems of optical instrumentation analysis and design of optical systems constitute a core area of optical engineering A large number of software with varying level of scope and applicability is currently available to facilitate the task However possession of an optical design software per se is no guarantee for arriving at correct or optimal solutions The validity and or optimality of the solutions depend to a large extent on proper formulation of the problem which calls for correct application of principles and theories of optical engineering On a different note development of proper experimental setups for investigations in the burgeoning field of optics and photonics calls for a good understanding of these principles and theories With this backdrop in view this book presents a holistic treatment of topics like paraxial analysis aberration theory Hamiltonian optics ray optical and wave optical theories of image formation Fourier optics structural design lens design optimization global optimization etc Proper stress is given on exposition of the foundations The proposed book is designed to provide adequate material for self learning the subject For practitioners in related fields this book is a handy reference Foundations of Optical System Analysis and Synthesis provides A holistic approach to lens system analysis and design with stress on foundations Basic knowledge of ray and wave optics for

tackling problems of instrumental optics Proper explanation of approximations made at different stages Sufficient illustrations for facilitation of understanding Techniques for reducing the role of heuristics and empiricism in optical lens design A sourcebook on chronological development of related topics across the globe This book is composed as a reference book for graduate students researchers faculty scientists and technologists in R D centres and industry in pursuance of their understanding of related topics and concepts during problem solving in the broad areas of optical electro optical and photonic system analysis and design
