**The Regularity of**

**General Parabolic Systems with Degenerate Diffusion** Verena Bögelein, Frank Duzaar, Giuseppe Mingione, 2013-01-28

The aim of the paper is twofold. On one hand the authors want to present a new technique called p-caloric approximation which is a proper generalization of the classical compactness methods first developed by DeGiorgi with his Harmonic Approximation Lemma. This last result initially introduced in the setting of Geometric Measure Theory to prove the regularity of minimal surfaces is nowadays a classical tool to prove linearization and regularity results for vectorial problems. Here the authors develop a very far reaching version of this general principle devised to linearize general degenerate parabolic systems. The use of this result in turn allows the authors to achieve the subsequent and main aim of the paper that is the implementation of a partial regularity theory for parabolic systems with degenerate diffusion of the type  $\partial_t u + \operatorname{div} (A \nabla u) = 0$  without necessarily assuming a quasi-diagonal structure, i.e. a structure prescribing that the gradient nonlinearities depend only on the explicit scalar quantity.

Barnett Ziegler Byleen and Sobecki's College Algebra with Trigonometry text is designed to be user friendly and to maximize student comprehension by emphasizing computational skills ideas and problem solving as opposed to mathematical theory. The large number of pedagogical devices employed in this text will guide a student through the course. Integrated throughout the text students and instructors will find Explore Discuss boxes which encourage students to think critically about mathematical concepts. In each section the worked examples are followed by matched problems that reinforce the concept being taught. In addition the text contains an abundance of exercises and applications that will convince students that math is useful. A MathZone site featuring algorithmic exercises videos and other resources accompanies the text.
