The Neurosciences Second Study Program:

The Neurosciences: Paths of Discovery, I F. WORDEN, J. SWAZEY, G. ADELMAN, 2012-12-06 To commemorate properly the 70th birthday of a man who by his very nature is too busy to pause for any kind of ceremonial event unless it has a concomitant functional output was a difficult problem for the Staff and Associates of the Neurosciences Research Program Frank F O S has always dreaded the prospect that sometime it might be appropriate for his colleagues to present him a Festschrift In fact Festschriften became his battle cry expressing his feeling that the idea of testimonials clustered into a book was anathema So the breakthrough idea for the planners was to organize a symposium around the theme of discovery in neuroscience that would be valuable scientifically and in its demonstration of interdisciplinary interaction would support that emphasis in Frank's career After much planning a program was developed beginning with a birthday party the evening before followed by the two day symposium and closing with the first F O Schmitt Lecture in Neuroscience We hope that publication of the scientific proceedings in this volume will be of interest not only to the neuroscience community but also to a broad general readership interested in discovery understanding and the creative processes in scientific work An organizing committee chaired by Fred Worden collected advice and guidance leading to the selection of speakers whose scientific careers have played an important part in the recent history of modern neuroscience

Toward a Science of Consciousness II Stuart R. Hameroff, Alfred W. Kaszniak, Alwyn Scott, 1998 This text originates from the second of two conferences discussing the concept of consciousness In 15 sections this book demonstrates the broad range of fields now focusing on consciousness

The Never-ceasing Search Francis Otto Schmitt, 1990 Frank Schmitt has for two thirds of a century been searching for and in many cases finding explanations of major biomedical importance His is a very human story of a youth in high school doing experiments in a makeshift chemical laboratory in the attic of the family home of a young university student who organized a student's science society and whose undergraduate research on cell structure was published in major professional journals of a medical school student who wrote a thesis that attracted the attention of cardiologists for many years of a devoted husband who with his young wife spent two postdoctoral years in Berkeley London and Berlin and later made two trips around the world with her as he set up a worldwide network of neuroscientists As a young scientist at Washington University Schmitt investigated polarization optical and x ray diffraction methods to discover the molecular structure of living tissues this long before molecular biology was established as a scientific discipline Schmitt was called to head biology at MIT in 1941 There he added electron microscopy to his ultrastructural repertoire and used much of it in wartime research As an Institute Professor MIT's highest rank he became a leader in the founding and characterization of the fields of biophysics and neuroscience Schmitt was also deeply committed to music along with his wife and had an interest in theology Photos

The Neurosciences, 1972 *The Neurosciences* Fred Samson, 1992 Text for upper level undergraduate and graduate level courses covers research theory and practical applications e g applying psychological principles and techniques that help people increase their motivation to exercise put group dynamics to good use and work with special populations Annotation copyrighted by Book News Inc Portland OR The Mindful Brain Gerald M. Edelman, Vernon B. Mountcastle, 1982-03-30 A proposal by two eminent biological scientists for a mechanism whereby mind becomes manifest from the operations of brain tissue This significant contribution to neuroscience consists of two papers the first by Mountcastle and the second by Edelman Between them they examine from different but complementary directions the relationships that connect the higher brain memory learning perception thinking with what goes on at the most basic levels of neural activity with particular stress on the role of local neuronal circuits Edelman's major hypothesis is that the conscious state results from phasic reentrant signaling occurring in parallel processes that involve associations between stored patterns and current sensory or internal input This selective process occurs by the polling of degenerate primary repertoires of neuronal groups that are formed during embryogenesis and development Edelman's theory extrapolates to the brain the selectionistic immunological theories for which he was awarded the 1972 Nobel Prize in Physiology or Medicine Mountcastle's paper reviews what is known about the actual structure of various parts of the neo cortex He relates the large entities of the neocortex to their component modules the local neuronal circuits and shows how the complex interrelationships of such a distributed system can yield dynamic distributed functioning There are strong conceptual parallels between Mountcastle's idea of cortical columns and their functional subunits and Edelman's concept of populations of neurons functioning as processors in a brain system based on selectional rather than instructional principles These parallels are traced and put into perspective in Francis Schmitt's Introduction *The neurosciences* Gardner C.
