The Cambridge Distributed Computing System Roger Michael Needham, Andrew J. Herbert, 1982 Osnove distribuiranega ra unalni kega sistema Univerze v Cambridgeu **Real-time Systems with Transputers** Occam User Group. Technical Meeting, 1990 **Dependable Computing Systems** Hassan B. Diab, Albert Y. Zomaya, 2005-10-05 A team of recognized experts leads the way to dependable computing systems. With computers and networks pervading every aspect of daily life there is an ever growing demand for dependability. In this unique resource researchers and organizations will find the tools needed to identify and engage state of the art approaches used for the specification, design and assessment of dependable computer systems. The first part of the book addresses models and paradigms of dependable computing and the second part deals with enabling technologies and applications. Tough issues in creating dependable computing systems are also tackled including Verification techniques, Model based evaluation, Adjudication and data fusion, Robust communications primitives, Fault tolerance, Middleware, Grid security, Dependability in IBM mainframes, Embedded software, Real time systems. Each chapter of this contributed work has been authored by a recognized expert. This is an excellent textbook for graduate and advanced undergraduate students in electrical engineering, computer engineering and computer science as well as a must have reference that will help engineers, programmers and technologists develop systems that are secure and reliable.

NBS Special Publication, 1974 **Proceedings of the Ninth ACM Symposium on Operating Systems Principles**, 1983 *Time-Triggered Communication* Roman Obermaisser, 2018-09-03 Time Triggered Communication helps readers build an understanding of the conceptual foundation, operation and application of time triggered communication which is widely used for embedded systems in a diverse range of industries. This book assembles contributions from experts that examine the differences and commonalities of the most significant protocols including TTP, FlexRay, TTEthernet, SAFEbus, TTCAN and LIN. Covering the spectrum from low cost time triggered fieldbus networks to ultra reliable time triggered networks used for safety critical applications, the authors illustrate the inherent benefits of time triggered communication in terms of predictability, complexity management, fault tolerance and analytical dependability modeling which are key aspects of safety critical systems. Examples covered include FlexRay in cars, TTP in railway and avionic systems and TTEthernet in aerospace applications. Illustrating key concepts based on real world industrial applications, this book Details the underlying concepts and principles of time triggered communication. Explores the properties of a time triggered communication system, contrasting its strengths and weaknesses. Focuses on the core algorithms applied in many systems including those used for clock synchronization, startup, membership and fault isolation. Describes the protocols that incorporate presented algorithms. Covers tooling requirements and solutions for system integration including scheduling. The information in this book is extremely useful to industry leaders who design and manufacture products with distributed embedded systems based on time triggered communication. It also benefits suppliers of embedded components or development tools used in this area. As an
