## **Iterations Of Differential Operators:**

*Iterations of Differential Operators* A. V. Babin, 1989 Translated from the Russian by H Zahavi Topics covered include the activity of linear and nonlinear differential operators the related theories of functions and operators and the connections between the theory of functions and partial differential equations The author focuses on new methods of constructing solutions for partial differential equations and looks at research into the smoothness of these solutions Formulae theorems and lemmas are numbered independently for quick reference and the detailed listing of the subjects covered in each chapter enables the reader to find a particular area of interest without difficulty Annotation copyrighted by Book News Inc Portland OR **Iteration Theory and Its Functional Equations** Roman Liedl, Ludwig Reich, György Targonski, 1985-12

Walter Mead Patterson, 1974-07-22 In this expository work we shall conduct a survey of iterative techniques for solving the linear operator equations  $Ax = y$  in a Hilbert space Whenever convenient these iterative schemes are given in the context of a complex Hilbert space Chapter II is devoted to those methods three in all which are given only for real Hilbert space Thus chapter III covers those methods which are valid in a complex Hilbert space except for the two methods which are singled out for special attention in the last two chapters Specifically the method of successive approximations is covered in Chapter IV and Chapter V consists of a discussion of gradient methods While examining these techniques our primary concern will be with the convergence of the sequence of approximate solutions However we shall often look at estimates of the error and the speed of convergence of a method *Error Estimation and Iterative Improvement for the Numerical Solution of Operator Equations* Bengt Lindberg, 1976 A Method for estimation of the global discretization error of solutions of operator equations is presented Further an algorithm for iterative improvement of the approximate solution of such problems is given The theoretical foudation for the algorithms are given as a number of theorems Several classes of operator equations are examined and numerical results for both the error estimation algorithm and the algorithm for iterative improvement are

given for some classes of ordinary and partial differential equations and integral equations Author **Iterative Methods for Nonlinear Operator Equations in Banach Spaces** Shih-sen Chang,Yeol Je Cho,Haiyn Zhou,2002 Since Banach s fixed point theorem was proved by Banach in 1922 many authors have used this theorem to show the existence and uniqueness of solutions for differential and integral equations a system of simultaneous linear algebraic equations by methods of successive approximations etc and have extended generalised and improved this theorem in several ways The purpose of this book is to give a comprehensive introduction to the study of iterative approximation methods for solutions of nonlinear equations involving some kinds of nonlinear mappings and multi valued mappings in Banach spaces and normed linear spaces by the Mann and Ishikawa iterative sequences with errors and mixed errors and the generalised steepest descent approximations
