## **The Logic Of Sufficiency:**

**The Logic of Sufficiency** Thomas Princen, 2005-09-30 What if modern society put a priority on the material security of its citizens and the ecological integrity of its resource base What if it took ecological constraint as a given not a hindrance but a source of long term economic security How would it organize itself structure its industry shape its consumption Across time and across cultures people actually have adapted to ecological constraint They have changed behavior they have built institutions And they have developed norms and principles for their time Today s environmental challenges at once global technological and commercial require new behaviors new institutions and new principles In this highly original work Thomas Princen builds one such principle sufficiency Sufficiency is not about denial not about sacrifice or doing without Rather when resource depletion and overconsumption are real sufficiency is about doing well It is about good work and good governance it is about goods that are good only to a point With examples ranging from timbering and fishing to automobility and meat production Princen shows that sufficiency is perfectly sensible and yet absolutely contrary to modern society s dominant principle efficiency He argues that seeking enough when more is possible is both intuitive and rational personally organizationally and ecologically rational And under global ecological constraint it is ethical Over the long term an economy indeed a society cannot operate as if there s never enough and never too much
