Hess, 1997 Since the earliest days of manned flight designers have sought to assist the pilot in the performance of tasks by using stick and feel systems to bring these tasks within the bounds of human physical capabilities This volume describes stick and feel systems in two parts Part one describes the technologies which have been developed throughout the history of 20th Century aviation Part two describes how modern systems dynamics interact with the human pilot It is hoped that the design lessons and approaches outlined in this volume will contribute to a better understanding and appreciation of the importance of force feel system design in aircraft rotorcraft flight control
