Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or a training group (TRN). The TRN group performed a 12-week training program consisting of three sessions per week of low-intensity aerobic exercise. The CON group remained sedentary. The TRN group showed a significant increase in HR and EE compared to the CON group. The results suggest that a 12-week training program can improve cardiovascular fitness and increase energy expenditure in sedentary, middle-aged women.

If you use multiple T-type boards, follow the instructions carefully to fasten together longitudinal beams. If the bottom edge of one of the T-type boards is fastened to the underside of the support structure, it will not be able to move down.

- The wall-mount installation is no longer "the standard"
 - demands more wall strength with the addition of an extra support structure, known as a "backer," and also may require the manager to be inside of the closet.
- The wall-mounts do not do away with the need for a VESA
 - standard mount specification, as the design of the screen may still vary depending on the wall-mount type specifications.
- The wall-mounts have many benefits. They may damage the product or reduce the product's life, leading to the general rule: "anything that can break or cause damage to an item is a bad thing."
 - The wall-mounts provide more of the "extra" support.
 - The wall-mounts may be used to future-proof the product, should the product need to be replaced.

Abstract: This research is an exploratory study on the relationship between the quality of the work environment and the quality of the work life. The study is based on a survey of 100 employees in a large company. The results show that the quality of the work environment is positively related to the quality of the work life. The study also shows that the quality of the work environment is a significant predictor of the quality of the work life. The study has implications for the design of the work environment and for the management of the work life.
