understanding of how an igneous rock can form from molten material Environmental factors responsible for important
variations observed in magnetic rocks are stressed Two fundamental factors affecting or controlling the mineral composition
and texture of the resulting rock initial magma composition and cooling rate are also stressed In addition reasons why
scientists classify materials in general and how they classify rocks in particular are explored However the ability to name or
identify rocks is not a necessary result of attaining the module s goals Supplemental questions included at the end of the

module may prove difficult for the average non major they are intended to challenge the superior student Like other modules in the series this module is inquiry and problem oriented dealing with interdisciplinary contemporary and pragmatic aspects of the subject matter It is designed to be open ended so that ideas can be incorporated into higher level classwork Author JN
