The Calcium Channel Structure Function And Implications:

The Calcium Channel: Structure, Function and Implications Martin Morad, Winifred G. Nayler, Stanislav Kazda, Matthias Schramm, 2012-12-06 This is the first book to summarize experimental results from the new rapidly expanding field of research into the calcium channel in cell membrane Calcium is an ubiquitous messenger of various cellular functions Its fundamental role in the regulation of cardiac contractions has long been recognized Drugs counteracting some actions of calcium ions namely calcium antagonists have since become essential to research In the last decade it has been established that calcium ions reach their target intracellular system by passing through specialized calcium channels in the membrane Recently improved experimental techniques combined with the discovery of highly specific Ca channel ligands have dramatically enlarged our knowledge of the molecular structure and function of such channels The contributions by leading world specialists shed new light on both basic science and possible clinical implications for cardiovascular pharmacology endocrinology and neuropharmacology

The calcium channel Martin Morad, 1988 **Calcium Antagonists and the Kidney** Murray Epstein, Rodger Loutzenhiser, 1990 Proceedings of the Australian Physiological and Pharmacological Society Australian Physiological and Pharmacological Society, 1990 *Intracellular Calcium Regulation* Felix Bronner, 1990-03 Intracellular Calcium Regulation Editor Felix Bronner A notable development in biological research is the recent widespread interest in the role played by calcium in cellular metabolism Calcium homeostasis has been studied intensively for many years and mechanisms by which calcium absorption excretion and bone deposition are effected and regulated are beginning to be understood in detail It now appears there may exist a parallel between the maintenance and regulation of intracellular and extracellular calcium This volume presents up to date information on intracellular calcium regulation and thus provides a foundation for studies that aim to explore the relationship between intracellular and extracellular calcium metabolism Intracellular Calcium Regulation examines in detail what happens to calcium inside the cell and offers authoritative discussions on such topics as calcium fluxes defining the role played by the plasma membrane in regulating the cellular calcium level the application of tracer techniques to an analysis of the cellular calcium pool the compartments making up the pool and the rates of exchange between compartments processes of calcium entry into the cell describing entry into cells that do not fire action potentials as well as three types of voltage sensitive calcium channels including their distribution pharmacology molecular properties and modulation organelles such as the endoplasmic reticulum the Golgi complex lysosomes or mitochondria and their role in regulating intracellular calcium levels the new exciting field of calcium binding or calcium modulated proteins such as troponin C parvalbumin S 100 proteins calbindins and calmodulin as well as some novel calcium binding proteins like the 42C and 42A proteins calcyclin and caltractin calcium efflux analyzing the role and function of the plasma membrane calcium pump and the Na Ca²⁺ exchanger including the kinetics of ATP hydrolysis how calcium transport and ATP hydrolysis are linked the kinetics and properties of the sodium calcium exchange

its regulation and role in such specialized cells as retinal rods and cardiac myocytes calcium transport as carried out by resting stimulated and excitable cells with emphasis on activated phospholipase C involvement of the G proteins and protein kinase C calcium transport as carried out by the specialized transport cells of intestine and kidney entry via calcium channels intracellular diffusion as facilitated by the calcium binding proteins and extrusion via the Ca ATPase Intracellular Calcium Regulation will be of interest to researchers and graduate students in the areas of biochemistry biophysics cell biology nutrition gastroenterology nephrology and anatomy *Arch Int Pharmacodyn Ther* ,1989 Summaries at end of articles

Skeletal Muscle Structure, Function, and Plasticity Richard L. Lieber,2010 In its Third Edition this text addresses basic and applied physiological properties of skeletal muscle in the context of the physiological effects from clinical treatment Anyone interested in human movement analysis and the understanding of generation and control from the musculoskeletal and neuromuscular systems in implementing movement will find this a valuable resource A highlight color has been added to this edition s updated figures and tables and the color plates section has been doubled ensuring that all figures that need color treatment to clarify concepts receive this treatment A new Clinical Problem feature uses concepts presented in each chapter in the context of a specific clinical case for example a spinal cord injury a sports accident or rehabilitation after bed rest *Physiology and Pathophysiology of the Heart* ,1995 A reference that provides the foundation of the basic science aspects of cardiac function and dysfunction bridging the gap between basic cardiovascular science and clinical science Divided into two major sections on cardiac muscle and coronary circulation the volume integrates all relevant aspects of the factors influencing the function of the heart under normal and several abnormal conditions It also provides a foundation for understanding of the mechanism of action of various types of cardioactive drugs including antiarrhythmic drugs and positive inotropic agents This revised and updated edition adds 14 new chapters including two on the molecular structure of ion channels and several on the ionic channels of myocardial cells vascular smooth muscle cells and endothelial cells Annotation copyright by Book News Inc Portland OR Calcium Signalling in the Nervous System Platon Grigor'evich Kostin,Aleksei Nestorovich Verkhatskii,1995 Calcium ions play an important role in the function of excitable cells from the triggering of impulses in nerve cells to the regulation of biochemical pathways and basic cellular functions of all cell types in the nervous system Calcium signalling is the main coupling mechanism linking external stimuli via the membrane with intracellular processes Calcium Signalling in the Nervous System provides an up to date account of the most fundamental aspects of calcium signal generation in the nervous system including pathways for Ca²⁺ influx buffering in the cytosol involvement of intracellular calcium stores and Ca²⁺ extrusion The book also gives an overview of the most important aspects of interaction of Ca²⁺ ions with other messenger systems the functional meaning of Ca²⁺ ions as well as the pharmaceutical tools used for their dissection and modulation The role of calcium in a variety of neural cell types and implications in brain function are also discussed including the control of gene expression cell differentiation and programmed cell death **American Journal of**
