Iterative Algorithms For Multilayer Optimizing Control:

Iterative Algorithms for Multilayer Optimizing Control Mietek A. Brdys, Piotr Tatjewski, 2005 The book presents basic structures concepts and algorithms in the area of multilayer optimizing control of industrial systems as well as the results of the research that was carried out by the authors over the last two decades The methodologies and control algorithms are thoroughly illustrated by numerous simulation examples Also the applications to several case study examples are presented These include ethylene distillation column vaporizer pilot scale plant styrene distillation line consisting of three columns and industrial furnace pilot scale plant A temporal decomposition is applied to the Integrated Wastewater System case study to derive multilayer dynamic optimizing controller with repetitive robust model predictive control mechanism distributed over the layers operating in different time scales

Hierarchical Control and Optimization Strategies Applied to Solar Membrane Distillation Facilities

Juan D. Gil, 2023-04-13 This book offers a systematic study of control algorithms applied in the operation of solar membrane distillation SMD facilities After a short introduction to membrane distillation systems powered by solar energy it reports on the various stages of the development of a comprehensive operating strategy based on modelling control and optimization techniques which enables an improved operation of SMD plants helping the commercialization of the SMD technology A special focus of the research was to maximize the distillate production of the MD modules while reducing their thermal energy consumption being those two important weaknesses of the current technology as well as their minimizing operating costs The optimised operating strategies were tested in a real pilot plant located at Plataforma Solar de Almer a dependency of the Centro de Investigaciones Energéticas Medioambientales y Tecnológicas CIEMAT of Spain All in all this thesis offers extensive information on control and modeling algorithms and on their practical applications in solar membrane distillation plants

Adaptive Dynamic Programming with Applications in Optimal Control

Derong Liu, Qinglai Wei, Ding Wang, Xiong Yang, Hongliang Li, 2017-01-04 This book covers the most recent developments in adaptive dynamic programming ADP The text begins with a thorough background review of ADP making sure that readers are sufficiently familiar with the fundamentals In the core of the book the authors address first discrete and then continuous time systems Coverage of discrete time systems starts with a more general form of value iteration to demonstrate its convergence optimality and stability with complete and thorough theoretical analysis A more realistic form of value iteration is studied where value function approximations are assumed to have finite errors Adaptive Dynamic Programming also details another avenue of the ADP approach policy iteration Both

basic and generalized forms of policy iteration based ADP are studied with complete and thorough theoretical analysis in terms of convergence optimality stability and error bounds Among continuous time systems the control of affine and nonaffine nonlinear systems is studied using the ADP approach which is then extended to other branches of control theory including decentralized control robust and guaranteed cost control and game theory In the last part of the book the real world significance of ADP theory is presented focusing on three application examples developed from the authors work renewable energy scheduling for smart power grids coal gasification processes and water gas shift reactions Researchers studying intelligent control methods and practitioners looking to apply them in the chemical process and power supply industries will find much to interest them in this thorough treatment of an advanced approach to control **Feature Papers**

Michael Henson, 2018-10-04 This book is a printed edition of the Special Issue Feature Papers that was published in *Processes* *Transport of Water versus Transport over Water* Carlos Ocampo-Martinez, Rudy R. Negenborn, 2015-06-03 This book aims at stimulating discussion between researchers working on state of the art approaches for operational control and design of transport of water on the one hand and researchers working on state of the art approaches for transport over water on the other hand The main contribution of the book as a whole is to present novel perspectives ultimately leading to the management of an envisioned unified management framework taking the recent advances from both worlds as a baseline The book is intended to be a reference for control oriented engineers who manage water systems with either or both purposes in mind transport of water transport of goods over water It highlights the possible twofold nature of water projects where water either acts as primary object of study or as a means The book is dedicated to comparing and relating to one another different strategies for operational management and control of different but strongly related systems in the framework of the water In that sense the book presents different approaches treating both the transport of water and transport over water It compares the different approaches within the same field highlighting their distinguishing features and advantages according to selected qualitative indices and demonstrates the interaction and cross relations between both fields It will also help to determine the gaps and common points for both fields towards the design of such a unifying framework which is lacking in the literature Additionally the book looks at case studies where the design of modeling control strategies of either transport of water or transport over water have been proposed discussed or simulated *International Journal of Applied Mathematics and Computer Science* ,2006 **Mathematical Reviews** ,2007 **The British National Bibliography** Arthur James Wells, 2005 **Large Scale Systems Theory and Applications**, 1983 A. and Applications 1989 K. Reinisch, M. Thoma, 1990-06-08 The papers present new trends on the development of theory and applications in the field of large scale systems analysis planning and control The issues discussed are proving to be of great importance as systems of growing complexity are found in all fields of human activities often developed by economic organizational and technological effects The papers are divided into three main areas of interest Modelling Analysis Basic Controls Superordinate Controls and Decisions Applications The Engineering Index Annual ,1992 Since its creation in 1884 Engineering Index has covered virtually every major engineering innovation from around the world It serves as the historical record of virtually every major engineering innovation of the 20th century Recent content is a vital resource for current awareness new production information technological forecasting and competitive intelligence The world's most comprehensive interdisciplinary engineering database Engineering Index contains over 10 7 million records Each year over 500 000 new abstracts are added from over 5 000 scholarly journals trade magazines and conference proceedings Coverage spans over 175 engineering disciplines from over 80 countries Updated weekly **Image Analysis and Processing** Alberto Del Bimbo, 1997 This book is part of the refereed 2 volume proceedings of the 9th International Conference on Image Analysis and Processing ICIAP 97 held in Florence Italy September 1997 Both volumes together present several keynote contributions and 173 revised papers selected from over 300 submissions The contributing authors more than 400 in number provide a wealth of new results in the areas of image analysis pattern recognition and computer vision Among the basic topics covered are image enhancement image segmentation image compression motion analysis object recognition image understanding and special hardware architectures and systems etc Among the application areas covered are biomedical imaging character recognition safety and surveillance object identification etc **International Aerospace Abstracts** ,1995 **Gradient Index, Miniature, and Diffractive Optical Systems** ,2001 **Control and Coordination in Hierarchical Systems** ,1980 The purpose of this book is to present the theory of control and coordination in hierarchical systems that is in systems where the decision making responsibility has been divided Since it aims to present theory that will be useful for applications it not only encompasses the basic general and consequently somewhat abstract principles of coordination but also considers such practical features as differences between models and the reality they describe constraints possible use of feedback information and time horizons Preface Control and Intelligent Systems ,2003 Journal of Dynamic Systems, Measurement, and Control ,1999 Publishes theoretical and applied original papers in dynamic systems Theoretical papers present new theoretical developments and knowledge for controls of dynamical systems together with clear engineering motivation for the new theory Applied papers include modeling simulation and corroboration of theory with emphasis on demonstrated practicality **Applied Science & Technology Index** ,1997
