**Sustainable Coloration of Textiles** Subramanian Senthilkannan Muthu,2025-07-02 This volume provides a variety of cases on sustainable coloration of textiles It offers valuable insights and solutions to reduce the environmental impact of textile dyeing and pollution due to extensive use of water energy and toxic chemicals The cases presented in this book offer sustainable innovations and strategies to mitigate the impacts of textile coloration This work will serve as an essential resource for students educators and practitioners looking to understand and implement sustainable practices in textile production    **Physico-chemical Aspects of Textile Coloration** Stephen M. Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a

diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. *Physico Chemical Aspects of Textile Coloration* provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing. Dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level. Fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption. Detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres, polyester, polyamide, wool, polyacrylonitrile and silk fibres. Non aqueous dyeing as represented by the use of air, organic solvents and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium. The up to date text is supported by a large number of tables, figures and illustrations as well as footnotes and widespread use of references to published work. The book is essential reading for students, teachers, researchers and professionals involved in textile coloration.
