Implementing Ecological Integrity Philippe Crabbé, Alan J. Holland, Lech Ryszkowski, L. Westra, 2012-12-06 This book contains some of the papers which were presented at the NATO Science Environmental Security Advanced Research Workshop on Implementing Ecological Integrity Restoring Regional and Global Environmental and Human Health held in Budapest from June 26 to July 1 1999 All papers presented are summarized in the Introduction and in some cases shorter versions are published A multidisciplinary core of American and Western European participants had met over the preceding years to discuss the concept of ecological integrity The term ecological integrity is found in environmental policy documents but generally is not defined It competes with other recent terms or environmental narratives such as ecosystem health and sustainable development and also with older ones such as

conservation Therefore it is deemed important not only to sort out the definitions of these concepts but also to find out whether their practical implications differ Moreover it was interesting to find out whether participants from Central and Eastern European Countries CEEC and more generally from NATO partner countries would be first responsive to this concept and second would hold different views of it This explains the broad albeit not always consistent range of topics which are covered in this book The core group learned that CEEC and other NATO partners participants were responsive to the concept but that they were less exclusive of human influence

Environmental Taxes Kalle Määtä, 2006-01-01 Environmental taxes differ from each other according to the functions they serve and the manner in which they are implemented This study highlights the appropriateness of different kinds of environmental taxes against a rigorous framework of theory and case study evidence The purpose of this book is to analyse

the way in which environmental taxes are categorized and which factors affect the effectiveness and efficiency of the different kinds of environmental taxes in practice This pragmatic approach is emphasized along with the multiplicity of regulatory problems such as At what level should the environmental tax rate be set What is the proper time schedule for introducing an environmental tax What are the most appropriate taxable characteristics and how should they be determined What activities should be exempt from environmental taxation How can tax relief be implemented These are only some of the regulatory problems explored in this study which also encompasses an examination of the theory of regulation The author argues that economists have often paid too little attention to the administrative and legal issues concerning the implementation of legislation such as environmental tax laws which are of course vital to the success of any potential policy Lawyers too have in turn neglected the theory of regulation which would assist in analysing problems in a future oriented way Environmental taxes will therefore be of great interest to a wide audience of environmental economists law and economics scholars as well as policymakers Back cover
