Pearson,Nigel C. Steele,Rudolf F. Albrecht,2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are subjects of the contributions to this volume There are contributions reporting successful applications of the technology to the solution of industrial commercial problems This may well reflect the maturity of the technology notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm Theoretical issues also receive attention notably in connection with the radial basis function neural network Contributions in the field of genetic algorithms reflect the wide range of current applications including for example portfolio selection filter design frequency assignment tuning of nonlinear PID controllers These techniques are also used extensively for combinatorial optimisation problems **Intelligent Data Analysis for e-Learning** Jorge Miguel,Santi Caballé,Fatos Xhafa,2016-09-06 Intelligent Data Analysis for e Learning Enhancing Security and Trustworthiness in Online Learning Systems addresses information security within e Learning based on trustworthiness assessment and prediction Over the past decade many learning management systems have appeared in the education market Security in these systems is essential for protecting against unfair and dishonest conduct most notably cheating however e Learning services are often designed and implemented without considering security requirements This book provides functional approaches of trustworthiness analysis modeling assessment and prediction for stronger security and support in online learning highlighting the security deficiencies found in most online collaborative learning systems The book explores trustworthiness methodologies based on collective intelligence than can overcome these deficiencies It examines trustworthiness analysis that utilizes the large amounts of data learning activities generate In addition as processing this data is costly the book offers a parallel processing paradigm that can support learning activities in real time The book discusses data visualization methods

for managing e Learning providing the tools needed to analyze the data collected Using a case based approach the book concludes with models and methodologies for evaluating and validating security in e Learning systems Indexing The books of this series are submitted to EI Compendex and SCOPUS Provides guidelines for anomaly detection security analysis and trustworthiness of data processing Incorporates state of the art multidisciplinary research on online collaborative learning social networks information security learning management systems and trustworthiness prediction Proposes a parallel processing approach that decreases the cost of expensive data processing Offers strategies for ensuring against unfair and dishonest assessments Demonstrates solutions using a real life e Learning context Students Solutions Manual
