Bellack, 1984 *Schizophrenia* Eckart R. Straube, 1990 Schizophrenia remains the most complex puzzling and because of its tendency towards chronicity the most severe of the mental disorders It is a very heterogeneous disorder characterized by extreme disruptions of thought perception behavior and emotion About 1 % of the population worldwide will experience at least one schizophrenic episode Most of the patients will have a number of exacerbations leading in about 30% of cases to a chronic residual state due either to the illness itself or to psychosocial environmental factors or most likely to the interaction of both Given the enormous personal hardship for patients and their relatives as well as the staggering costs of the illness for our societies research in schizophrenia has become the number one priority in many countries especially in the United States However research on the etiology of schizophrenia has failed to establish a single causal factor and it is nowadays accepted to be multifactorial A combination of biological predisposition and environmental circumstances is assumed to be necessary for the manifestation of the illness This shift in orientation away from an either or biological or environmental e g family interaction point of view as evident in the work of the 1950s and 1960s was certainly desirable to encourage research
