Niki Passath

The Intimate Machine:

Sex/Machine Patrick D. Hopkins, 1998 As powerful interacting social and physical forces gender and technology shape our experiences cultures and identities sometimes in such comfortable and subtle ways that it takes effort to appreciate them sometimes in such conspicuous and explosive ways that everyone recognizes their importance Delving into these issues is an opportunity to discover how technology promises or threatens to rewrite our ideas about sex sexuality and gender identity

Thinking Like a Machine Niki Passath, 2017-10-10 In many modes of behavior people act more and more like machines In the context of work people have become a human resource that can be replaced at any time An existence without purpose cannot be imagined just as a machine without function is absurd Do humans already think like machines Do they have a master slave relationship with them Are humans no longer any more than an organic prosthetic fitted to an inorganic body With his created robotic beings Niki Passath breaks with this seemingly rational technological system By eliminating the predominant rationality of the machine he gives it a new meaning This book is the first monograph on the artist's oeuvre Internationally renowned experts shed light on the many facets of his work *Machinery* Fred Herbert Colvin, Lester Gray French, 1900 **Machine Ethics and Robot Ethics** Wendell Wallach, Peter Asaro, 2020-09-10 Once the stuff of science

fiction recent progress in artificial intelligence robotics and machine learning means that these rapidly advancing technologies are finally coming into widespread use within everyday life Such rapid development in these areas also brings with it a host of social political and legal issues as well as a rise in public concern and academic interest in the ethical challenges these new technologies pose This volume is a collection of scholarly work from leading figures in the development of both robot ethics and machine ethics it includes essays of historical significance which have become foundational for research in these two new areas of study as well as important recent articles The research articles selected focus on the control and governance of computational systems the exploration of ethical and moral theories using software and robots as laboratories or simulations inquiry into the necessary requirements for moral agency and the basis and boundaries of rights and questions of how best to design systems that are both useful and morally sound Collectively the articles ask what the practical ethical and legal issues arising from the development of robots will be over the next twenty years and how best to address these future considerations

Reproductive Technologies as Global Form Michi Knecht, 2012-07 In the thirty five years since the first test tube baby in vitro fertilization and other methods of reproductive assistance have become a common aspect of family life and medicine in affluent nations and increasingly throughout the world How do persons seeking treatment donors and medical experts make use of these reproductive technologies How in crossing borders between nations do they manage to evade legal and bioethical regulations And how do they make sense of these new modes of making kinship against the backdrop of diverse world views and social settings **Social Learning Technologies** Marc van
