Theodore Arnold Bookhout

Snowshoe The Hare:

Snowshoe Hare Dee Phillips, 2020 In a snowy forest a small animal with pure white fur is munching on evergreen branches It is a snowshoe hare When it s time to move on the hare hops over the forest floor with ease Its huge feet act like snowshoes and keep it from sinking in as it moves along the snow covered ground Its white coat helps it blend in with its snowy habitat keeping it safe from predators Filled with information perfectly suited to the abilities and interests of its primary grade audience this colorful fact filled volume gives readers a chance not only to learn all about snowshoe hares and how their bodies are adapted to the extreme cold but also to develop their powers of observation and critical thinking Built in activities such as guessing how a snowshoe hare stays camouflaged when the snow melts in spring and finding objects that weigh the same amount as a baby hare give readers a chance to gain insights beyond the facts and figures Summer Coat, Winter Coat Doe Boyle, 1993 As the seasons pass Snowshoe Hare s coat changes from brown to white and back to brown again helping her to blend into her habitat and avoid predators as she searches for food **Snowshoe the Hare** Kathryn Ivy White, 2005-10 Snowshoe the Arctic hare is frightened when Otter tells him he will turn white in the winter and then melt away when it turns warm in the spring Includes facts about climate *Snowshoe Hare* I. Krebs Professor of Zoology University of British Columbia, Edmonton Stan Boutin Professor of Zoology University of Alberta, Rudy Boonstra Professor of Physiology and Zoology University of Toronto, 2001-03-31 The boreal forest is one of the world s great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world s closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada s leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9 10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest Ecosystem Dynamics of the Boreal Forest The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in
